

analysis of financial results

FOR THE SIX MONTHS ENDED 31 DECEMBER 2022

contents

ABOUT THIS REPORT

This report covers the unaudited condensed consolidated financial results of FirstRand Limited (FirstRand or the group) based on International Financial Reporting Standards (IFRS) for the six months ended 31 December 2022.

The primary results and accompanying commentary are presented on a normalised basis as the group believes this most accurately reflects its economic performance. The normalised results have been derived from the IFRS financial results.

Normalised results include a condensed consolidated income statement, statement of comprehensive income, statement of financial position and a statement of changes in equity. A detailed description of the difference between normalised and IFRS results is provided on pages 162 to 164. Detailed reconciliations of normalised to IFRS results are provided on pages 176 to 184. Commentary is based on normalised results, unless indicated otherwise.

Simonet Terblanche, CA(SA), supervised the preparation of the condensed consolidated financial results.

1966/010753/06

Certain entities within the FirstRand group are authorised financial services and credit providers. This analysis is available on the group's website: www.firststrand.co.za

overview of results

Simplified group structure

FirstRand

LISTED HOLDING COMPANY (FIRSTRAND LIMITED, JSE: FSR)

* Division

** Branch

Representative office

DirectAxis is a business unit of FirstRand Bank Limited.

† Trading as FNB Channel Islands.

‡ Wholly owned subsidiary of Aldermore Group.

⁴ Wholly owned subsidiary of FirstRand Securities.

⁵ Ashburton Investments has a number of general partners for fund seeding purposes. All of these entities fall under FirstRand Investment Management Holdings Limited.

Note:

The operations of FNB Tanzania were taken over by Exim Bank on 7 July 2022.

There were no material changes to the group structure over the period.

Structure shows effective consolidated shareholding

For segmental analysis purposes entities included in FRIHL, FREMA, FRI, FirstRand Investment Management Holdings Limited and FirstRand Insurance Holdings (Pty) Ltd are reported as part of the results of the managing business (i.e. FNB, WesBank, RMB or the Centre). The group's securitisations and other special purpose vehicles (SPVs) are in FRIHL, FRI and FRB.

FirstRand

FirstRand's portfolio of integrated financial services businesses comprises FNB, WesBank, RMB and Aldermore. The group operates in South Africa, certain markets in sub-Saharan Africa and the UK, and offers a universal set of transactional, lending, investment and insurance products and services.

“FirstRand continues to deliver attractive growth and superior returns to shareholders. Particularly pleasing is the ROE of 21.8%, now firmly positioned at the top end of the group’s stated range of 18% to 22%.

This performance for the first six months of the year resulted from the strong operational performances of the customer-facing businesses, FNB, WesBank, RMB and Aldermore, and demonstrates the size and quality of FirstRand’s transactional and deposit franchises, continued momentum in lending, with a better credit outcome than expected.”

Alan Pullinger ~ CEO

Introduction and group strategy

FirstRand Limited is a portfolio of integrated financial services businesses operating in South Africa, certain markets in sub-Saharan Africa and the UK. Many of these businesses are leaders in their respective segments and markets, and offer a broad range of transactional, lending, investment and insurance products and services.

The group’s long track record of delivering growth and superior returns is reflective of consistent execution on its core strategies. It also reflects the disciplined allocation of financial resources.

FirstRand’s earnings remain tilted towards South Africa and are mainly generated by its large lending, transactional and deposit franchises, which have resulted in deep and loyal customer bases. These domestic banking operations are mature and systemically important. Against the prevailing backdrop of weak macroeconomic growth, given the group’s size, any aspiration to outperform requires strategic distinction combined with sound execution. The key growth imperative in the domestic franchises is to grow customer numbers, do more business with customers, and do this more efficiently. The group is also investing in building capital-light revenues in adjacent activities such as insurance, and investment and asset management.

In the broader Africa portfolio, FirstRand remains focused on growing its presence and offerings in certain key markets where it believes it can build competitive advantage and scale over time. The group’s expansion strategy has been largely organic, complemented where possible by bolt-on acquisitions. There is a strong focus on building in-country customer and deposit franchises.

The UK operations continue to offer significant optionality in a large market with attractive risk-adjusted returns. The combined businesses of Aldermore and MotoNovo have healthy margins, a diversified asset portfolio, a scalable savings franchise and small shares of deep profit pools. The group remains confident it can build a more valuable business in the UK over time.

Operating environment

During the period under review, the macroeconomic environment was characterised by a significant increase in global inflation as supply-chain constraints and pent-up demand drove up global goods prices. The ongoing Russian-Ukrainian war continued to impact food and energy prices. Given this backdrop, almost all the geographies where the group operates grappled with higher inflation and rising interest rates.

Global commodity prices continued to support terms of trade in South Africa and other broader Africa markets, also benefiting those sectors exposed to commodities. Despite these positive outcomes, inflation and interest rates weighed on household disposable income overall. These pressures were, however, not felt equally across all consumer segments and retail credit demand remained healthy. In South Africa, the private sector added headcount (following a prolonged period of job cuts) which provided some support to employment levels and household income, albeit off a low base. Conversely, wages in the public sector remained under pressure after more than a decade of above-inflation wage increases.

Corporate credit growth remained stronger than expected with a clear shift towards working capital and asset finance, suggesting that businesses continued to restock and invest in some productive capacity. Higher stages of loadshedding towards the end of the calendar year presented a challenge for small and medium-sized enterprises (SMEs) and sole proprietors, in particular.

In the UK, higher energy prices and other inflationary pressures resulted in a steep rise in the cost of living. Although some of these pressures have started to abate, the outlook for households is divided between those with sufficient savings and those without, with the latter potentially facing financial stress.

In the broader Africa region, the most noteworthy development was in Ghana, where a combination of tighter global financial conditions, current account stress and rapid debt accumulation resulted in a sovereign debt default.

Financial performance

The 15% increase in the group's normalised earnings was driven by good topline growth, reflecting continued momentum in new business origination in all large lending portfolios, excellent ongoing growth from the deposit franchise, the benefits of higher rates on the capital and deposit endowment, and the performance of the group's transactional franchise (measured by customer growth and volumes).

The relative size and quality of the FirstRand's transactional franchise allows the group to deliver good growth and superior returns to shareholders whilst maintaining a judicious and tactical approach to lending and protecting the balance sheet, particularly in an operating environment characterised by uncertainty and sluggish system growth.

The group's credit performance was better than anticipated, with almost all portfolios posting decreasing non-performing loans except in RMB and the UK operations. Cost growth remained well above inflation, and is a key focus area for the group.

The strong earnings performance, supported by capital optimisation, resulted in a normalised return on equity (ROE) of 21.8%, which is at the top end of the target range of 18% to 22%. The group produced R6.2 billion of economic profit (December 2021: R4.6 billion), or net income after cost of capital (NIACC), which is its key performance measure. Despite the record dividend payout for the year ended June 2022, the group grew net asset value (NAV) period-on-period.

The following table provides an overview of the group's performance.

FIRSTRAND GROUP FINANCIAL HIGHLIGHTS

<i>R million</i>	Six months ended 31 December		% change	Year ended 30 June

** December 2021 figures were adjusted. Core lending advances exclude assets under agreements to resell. Refer to page 187 for details of the change in presentation.

FirstRand's performance, in particular the composition and quality of its earnings and high return profile, continues to directly correlate to the consistent and disciplined execution on key objectives designed to maximise shareholder value, and are tightly managed through the group's financial resource management (FRM) process. In addition, the strength of the customer-facing businesses in the FirstRand portfolio has allowed the group to capitalise on profitable growth opportunities across all markets, sectors and segments – thus delivering resilient operating performances, despite the challenging macroeconomic environment. This is demonstrated by the levels of growth in normalised earnings delivered by the customer-facing businesses, as indicated in the table below.

SOURCES OF NORMALISED EARNINGS

R million	Six months ended 31 December					Year ended 30 June	
	2022	% composition	2021	% composition	% change	2022	% composition

Normalised earnings	18 047	100	15 742	100	15	32 663	100

* December 2021 figures were restated due to the reallocation of asset-based finance (ABF) customers from FNB commercial to WesBank corporate.

** In the UK operations management view shown in the table above and on pages 39 to 41, MotoNovo's front and back books are included. This differs from the segment report disclosed on pages 44 to 55 because MotoNovo's front book is included under Aldermore and MotoNovo's back book is included in the Centre.

Including Group Treasury – includes capital endowment, the impact of accounting mismatches, and interest rate, foreign currency and liquidity management.

† Includes FirstRand Limited (company).

Identifying and originating quality new business continued to require a fine balancing act given competitive actions in the market. However, the momentum in advances growth that commenced in the second half of the year to June 2022 continued. At the same time, the deposit franchise and transactional balances increased strongly, both of which have provided an underpin to the ROE.

FNB and WesBank's approach to retail origination continues to be informed by internal and external data analysis of affordability indicators which still suggest that low- to medium-risk customers have the most capacity for credit. This has been even more evident in a higher-rate environment. Origination therefore remains tilted towards these customers, particularly in the secured lending product set. This mix of advances growth has resulted in some margin compression, but the group believes it continues to capture a higher share of low- and medium-risk business.

In the commercial segment, advances growth remains the result of a consistent strategy to originate new business tactically in those sectors showing above-cycle growth, and which are expected to perform well even in a high inflationary and interest rate environment.

Growth in corporate advances continues to be strong, with origination also leaning towards lower-volatility sectors and better-rated counterparties.

The Centre performance includes several moving parts, which impacted overall growth in Centre NII, despite the net benefit of endowment. The key drivers include:

- > lower growth in capital endowment following the special dividend paid for the year ended June 2022;
- > lower returns earned on liquid assets;
- > the impact of accounting mismatches; and
- > the impact of the change in capital mix following recent AT1 issuances.

The group's origination strategy, particularly the appetite tilt away from high risk, its focus on growing the deposit franchise and the conservative provisioning approach, have resulted in a well-struck balance sheet. This is a direct outcome of FirstRand's financial resource management strategy given the group's post-pandemic growth thesis.

Given the high return profile, the group remains capital generative, with the Common Equity Tier 1 (CET1) ratio at 13.2% (December 2021: 13.6%) and, taking into account this strong capital level, the board is comfortable to keep the dividend cover unchanged at 1.7 times. This translates into a dividend of 189 cents per share, an increase of 20% period-on-period.

FirstRand's approach to managing the endowment profile through the cycle has resulted in positive outcomes for shareholders through the pandemic to date.

The rate of growth in the group's NII in the current period does not reflect the full extent of the rise in interest rates, given the higher base of NII created in previous periods from the implementation of Group Treasury's ALM strategies.

The group delivered earnings growth outperformance for the 2021 and 2022 financial years due to the cumulative additional NII generated by these strategies. This higher level of earnings allowed the group to increase its absolute dividend payout over the same period and underpinned the superior return profile, which ultimately translated into strong growth in NAV per share.

Revenue and cost overview

Overall group net interest income (NII) increased 13%, driven by healthy advances growth, continued strong deposit gathering and the endowment benefit.

The 5% increase in lending NII was mainly due to strong growth from RMB (average core lending advances up 21%) and the WesBank corporate book (+17%). Growth in FNB and WesBank's retail advances continued, but came at the expense of margin given the origination approach outlined previously.

In the UK operations, Aldermore's NII benefited from strong growth in advances, particularly in residential mortgages. In addition, the deposit margin expanded as rates paid to customers lagged the increases in the Bank of England (BoE) bank rate.

The broader Africa operations also delivered good growth in advances and deposits.

The group's transactional NII increased 22%, driven by growth in FNB retail and commercial customers, corporate and retail transactional deposit products and deposit endowment.

Notwithstanding the positive impact from endowment, the group's underlying deposit gathering strategies added materially to growth in NII. The retail and commercial segments benefited from ongoing momentum in savings and investment products. RMB's focus on growing operational balances through increased primary-banked relationships and the scaling of investment deposit offerings resulted in a significant increase in average deposits.

Growth in advances and deposits is unpacked by operating business and segment in the table below.

	Growth in advances %	Growth in deposits %
FNB	8	11
– Retail	7	8
– Commercial	10	15
– Broader Africa	7	5
WesBank	9	n/a
RMB*	25	19
UK operations**	9	16

* Advances growth for RMB based on core advances, which exclude assets under agreements to resell.

** In pound terms. Growth in deposits refers to customer savings deposits.

Group net interest margin (NIM) improved 1 basis point to 4.38% (December 2021: 4.37%). The lift in NIM primarily emanated from margin expansion in the UK operations.

Total group non-interest revenue (NIR) increased 11%, supported by 10% growth in fee and commission income, 5% growth in trading income and a 31% increase in insurance income. Investment income benefited from a large private equity realisation. This was partially offset by a R496 million impairment provision in the Centre relating to the Ghana sovereign's proposed debt restructuring and the impact of lower income from associates.

FNB delivered NIR growth of 13%, driven by customer acquisition, growth in underlying customer activity and transactional volumes. The domestic transactional franchise performed particularly well, delivering 15% growth in volumes. Good insurance premium growth and a reduction in claims further contributed. FNB Life's new business annual premium equivalent (APE) increased 22%, with premiums up 16%.

RMB's NIR, although up 14%, reflects a somewhat mixed picture. Knowledge-based fee income grew strongly on the back of origination activities and advisory mandates. The private equity business also delivered strong growth in gross annuity income and a material realisation, slightly offset by impairments taken

in the portfolio. Despite a strong performance from the broader Africa portfolio, trading income growth was muted compared to the previous period mainly due to softer performances from equities and commodities.

Total operating expenses were 9% higher, including a 13% increase in direct staff costs, driven by targeted and general salary increases and a 6% increase in headcount. Other cost drivers include:

- > the short-term insurance growth strategy;
- > the build-out and consolidation of the domestic enterprise platform;
- > scaling the group's footprint and platform in broader Africa; and
- > people, process and system investments in the UK business.

The cost-to-income ratio decreased to 50.7% (December 2021: 52.4%).

ANALYSIS OF CORE LENDING ADVANCES

	As at			December 2022 vs December 2021	December 2022 vs June 2022	June 2022 vs December 2021
	31 December 2022	30 June 2022	31 December 2021

Centre	24 827	24 356	24 490	1	2	(1)
Total group	1 410 711	1 311 441	1 267 506	11	8	3

* December 2021 figures were restated due to the reallocation of ABF customers from FNB commercial to WesBank corporate.

** In the UK operations management view shown in the table above and on pages 39 to 41, MotoNovo's front and back books are included. This differs from the segment report disclosed on pages 44 to 55 because MotoNovo's front book is included under Aldermore and MotoNovo's back book is included in the Centre.

Credit performance

The group's credit performance was better than expected, despite the prevailing macroeconomic environment. The overall credit loss ratio increased to 74 bps (December 2021: 65 bps), driven largely by the UK operations. The credit loss ratio, excluding the UK operations, decreased to 75 bps from 79 bps.

This underlying performance reflects the group's origination approach and was achieved despite inflation and interest rate pressures. However, given these pressures, balance sheet provision levels remained conservative against the in-force book as new origination adapts to macros dynamically. As such, management retained the stress scenario at the same absolute value as at June 2022. Overall performing coverage on core lending advances decreased slightly to 1.72% as compared to the June 2022 level of 1.78%, reflecting the growth in the book and mix change.

Non-performing loans (NPLs) decreased 7% period-on-period (a decline of R177 million since June 2022 despite the increase in the UK operations). NPLs as a percentage of core lending advances reduced to 3.59%, driven by work-outs and write-offs, the curing of paying NPLs, slower inflows given the group's origination approach, strong collections and advances growth.

The overall impairment charge increased to R5 008 million (December 2021: R4 027 million) driven by the following:

- > an increase in overall stage 1 provisions, which was expected given advances growth and a marginal uptick in the coverage ratio since June 2022;
- > an increase in stage 2 provisions reflecting book growth and origination strain. This was partly offset by a decrease in the coverage ratio as the mix of the book changed;
- > net write-offs and the post write-off recoveries remained similar to the prior period; and
- > the overall charge benefited from a decrease in NPLs.

ANALYSIS OF IMPAIRMENT CHARGE

	Six months ended				December 2022 vs June 2022	June 2022 vs December 2021	December 2021 vs June 2021

Interest suspended on stage 3 advances	(1 599)	(1 363)	(1 630)	(1 707)	17	(16)	(5)
Post write-off recoveries	(1 132)	(1 381)	(1 375)	(1 270)	(18)	–	8
Total impairment charge	5 008	3 053	4 027	4 246	64	(24)	(5)
Credit loss ratio (%) – core lending advances#	0.74	0.47	0.65	0.70			
Credit loss ratio excluding UK operations (%) – core lending advances#	0.75	0.45	0.79	0.96			

* Refer to page 95 for more information on the debt-to-equity restructure.

** Write-off of gross balances excluding prior period provisions held. The gross amounts written off have been recognised in the income statement over various reporting periods.

December 2021 has been adjusted for core lending advances, which exclude assets under agreements to resell.

The table above demonstrates the move in impairments on a rolling six-month view, based on movements in the balance sheet. The R964 million portfolio provision increase since June 2022 resulted from book growth. Performing coverage was largely maintained, as credit quality held up despite the deterioration in macroeconomic assumptions. Refer to pages 212 to 221 for the updated forward-looking information (FLI) and scenario weightings. The increase in NPL provisions (excluding the debt-to-equity restructure impact) is expected given the change in the macro environment, especially in the UK and Ghana.

CHANGE IN NPLs

	31 December 2022 vs 31 December 2021			31 December 2022 vs 30 June 2022		
	R million	% change	Percentage point contribution to overall NPL decrease	R million	% change	Percentage point contribution to overall NPL decrease
Operational NPLs*	(1 338)	(4)	(3)	(548)	(2)	>100
Other paying NPLs**	(1 853)	(17)	(3)	(362)	(4)	>100
NPLs (excluding UK operations)	(3 191)	(7)	(6)	(910)	(2)	>100
UK operations	(578)	(6)	(1)	733	9	(>100)
Change in total group NPLs	(3 769)	(7)	(7)	(177)	-	-

* Include debt review and other core lending advances.

** Include debt-review and other core lending advances <90 days in arrears and still subject to curing criteria.

The table above deals with the change in group NPL balances. It is pleasing to see the continued reduction in operational NPLs due to slower inflows, and ongoing work-outs and write-offs. Collections remained strong.

NPL coverage increased slightly to 49.0% (December 2021: 48.5%), given the change in mix. SA retail coverage increased marginally due to the curing of paying NPLs which attract lower coverage. This was partly offset by lower corporate and commercial coverage following the work-out and write-off of highly covered counters.

SA retail NPLs decreased 10% to R29.3 billion (December 2021: R32.7 billion). NPLs as a percentage of advances declined to 6.59% (December 2021: 7.85%), driven by the curing of paying NPLs, slower inflows, strong collections and support from higher advances growth.

SA commercial NPLs declined 13% to R5.4 billion (December 2021: R6.1 billion) or 3.35% of advances (December 2021: 4.31%). The decline was due to settlements and increased write-offs of historical NPL flows.

NPLs in the SA corporate and investment banking (CIB) portfolio declined since the June 2022 year end given the restructure and write-off of a fully provided loan in the private equity portfolio. Since June 2022, the NPL ratio declined to 1.06% of core lending advances, given the strong growth in advances. NPL coverage decreased to 47.6% (December 2021: 56.8%).

The broader Africa NPL ratio decreased to 4.83% (December 2021: 5.43%) driven by lower NPLs in Botswana and Zambia following high write-offs, a slowdown in new inflows and ongoing good recoveries.

In the UK operations, NPLs reduced to 2.66% of advances (December 2021: 2.96%). This was mainly due to growth in advances, curing and settlement in the Aldermore retail and commercial portfolios. MotoNovo NPLs continued to be affected by slower repossession in the UK, and the impact on collections due to the previously reported notice of sums in arrears (NOSIA) operational event.

Financial resource management

The management of the group's financial resources, which it defines as capital, funding and liquidity, and risk appetite, is a critical enabler to ensure FirstRand achieves its stated growth and return targets, and is driven by the group's overall risk appetite. Group Treasury is mandated to execute on FRM strategic initiatives.

Group Treasury also manages the interest rate and foreign exchange rate risk inherent in balance sheet activities within prudential and management limits, and the group's risk appetite. The aim is to protect and enhance earnings without adding to the overall risk profile.

Capital position

Capital ratios for the group and bank are summarised below.

CAPITAL ADEQUACY*

%	Internal targets**	Group		Bank#	
		As at 31 December			
		2022	2021	2022	2021
CET1	11.0 – 12.0	13.2	13.6	12.6	14.1
Tier 1	>12.0	13.9	14.3	13.6	14.7
Total	>14.5	16.0	16.5	16.1	17.6

* Including unappropriated profits.

** Group total capital adequacy target revised to >14.5% and bank remains at >14.25%.

Including the bank's foreign branches.

The Prudential Authority (PA) removed all temporary capital relief measures issued during the pandemic and reinstated the Pillar 2A requirement of 1% on 1 January 2022. The BoE reinstated the UK countercyclical buffer (CCyB) add-on of 1% in December 2022, which impacted the group's overall minimum capital requirements due to the reciprocity agreement in place with the PA in South Africa. Consequently, the group's total capital adequacy target was lifted by 25 bps to incorporate the CCyB change. The bank's targets remain unchanged.

The group's CET1 ratio remained strong at 13.2% (December 2021: 13.6%), well above the upper end of its internal target range, even after the payment of a special dividend of c. R7 billion in October 2022. The group accreted both net asset value (NAV) and CET1 over the year and continued its focus on the efficient use of financial resources, optimisation of risk-weighted assets (RWA) and rebalance of the capital stack.

Key factors driving the CET1 outcome are outlined below:

- > positive earnings generation over the 12 months, partly offset by the payment of ordinary and special dividends;
- > a decrease in the foreign currency translation reserve due to the rand's appreciation against the pound period-on-period;
- > successful financial resource optimisation strategies; and
- > an increase in RWA, mainly from credit risk driven by higher volumes, but partly offset by the rand appreciation. Higher revenue generation also resulted in an increase in operational risk RWA.

The group continued to actively manage its capital composition and issued a combination of Additional Tier 1 (AT1) and Tier 2 instruments during the period to support balance sheet growth and replace existing capital instruments. Given the favourable conditions in the local bond market, the group issued Tier 2 instruments totalling R3.2 billion and AT1 instruments totalling R2.8 billion to replace R4.0 billion of Tier 2 instruments redeemed during the period, as well as to partly prefund the redemption of FRB's \$500 million Tier 2 bond on 23 April 2023. Requisite approvals to call the \$500 million Tier 2 instrument have been received from the board and PA, and notice was given to bondholders on 23 February 2023. It remains the group's intention to continue to optimise its regulatory capital composition by issuing a combination of AT1 and Tier 2 capital instruments in the domestic and/or international markets to align to internal targets.

The implementation of the final Basel reforms remains a key focus and FirstRand continues to actively engage with the industry and regulator, as well as to participate in impact assessments to better understand the effects of the proposed reforms on the group. These have been incorporated into the group's forward-looking capital plan.

The group also adjusts available regulatory capital resources for certain volatile reserves, as well as expected regulatory and accounting changes that can be estimated. This provides an economic view of excess capital that is used in strategic decision-making.

Capital allocation and returns

The group's methodology for allocating capital to operating businesses considers internal capital targets, regulatory capital (average RWA consumption, regulatory deductions and anticipated regulatory changes), economic capital and NAV. Excess capital above internal capital target levels is not allocated to business.

A summary of the capital allocated to the group's operating businesses is provided in the following table.

AVERAGE CAPITAL ALLOCATED

R million	Six months ended 31 December		% change	Year ended 30 June

FirstRand group	21.8	20.1	20.6

* Comparatives were restated for segmentation changes and to align to the current capital allocation approach.

** Aldermore and MotoNovo front and back books. ROEs calculated in pound terms.

The superior returns generated by the group's portfolio have resulted in continued strong capital generation.

With the proposed implementation of the final Basel reforms, which further incorporate standardised elements, the group is increasing its focus on the true economic risk introduced to its balance sheet. FirstRand's capital allocation considers both regulatory and economic capital views.

Liquidity position

Liquidity risk is a natural outcome of the business activities undertaken by the group. To manage the resultant risk and enable business to operate efficiently and sustainably, the group seeks to optimise its funding composition, subject to structural liquidity constraints and prudential requirements. The group continues to pursue a deposit-led funding strategy that provides diversification and stability with an inherent liquidity risk offset. Furthermore, FirstRand holds appropriate liquidity buffers to withstand unexpected market disruptions.

The prudential liquidity risk metrics, liquidity coverage ratio (LCR) and net stable funding ratio (NSFR) are managed with adequate buffers above the regulatory minimums to enable the group to comfortably withstand the natural liquidity seasonality and cyclicality that is a consequence of its chosen funding mix. The liquidity overlays above prudential requirements are determined using stress testing and scenario analysis of cash in- and outflows.

The group's high-quality liquid assets (HQLA) portfolio provides a liquidity buffer against unexpected liquidity stress events or market disruptions, and serves to facilitate the changing liquidity needs of its operating businesses. The composition and quantum of available liquid assets are defined behaviourally by considering both the funding liquidity-at-risk and the market liquidity depth of these instruments. The HQLA portfolio has been constructed considering the group's funding composition and growth, liquidity risk appetite and prudential requirements. The portfolio is continually assessed and actively managed to ensure optimal composition, return and size.

The group remains well funded, with adequate liquidity buffers to meet both prudential liquidity requirements and internal risk targets. The group closely monitors key risk metrics and early warning indicators as part of its ongoing funding and liquidity planning.

LIQUIDITY POSITION

%	Group*		Bank*	
	As at 31 December			
	2022	2021	2022	2021
LCR				
Regulatory minimum	100	80	100	80
Actual	121	118	124	124
Average available HQLA (R billion)	392	342	349	310
NSFR				
Regulatory minimum	100	100	100	100
Actual	120	123	117	121

* The group's LCR and NSFR include the bank's operations in South Africa, and all registered banks and foreign branches in the group. The bank's LCR and NSFR reflect South African operations only.

During the period under review, the South African Reserve Bank (SARB) concluded its transition to the new monetary policy implementation framework (MPIF). The liquidity surplus framework has been well received by market participants, imparting additional liquidity and payment capacity.

Foreign currency balance sheet

The group adopts a disciplined and measured approach to the management of its foreign currency investments in subsidiaries and their balance sheets. Approved risk frameworks guide the allocation of resources and the management of local and foreign currency risks. The group's framework for the management of external debt considers sources of sovereign risk and foreign currency funding capacity, as well as the macroeconomic vulnerabilities of South Africa. The group continues to employ self-imposed structural borrowing and liquidity risk limits which are significantly more conservative than the regulatory macroprudential limits.

The group's philosophy is that, over the longer term, foreign currency assets should be supported by appropriate foreign currency liabilities, primarily in the same jurisdiction. The group's key foreign currency operations are outlined below:

- > the UK operations of Aldermore (including MotoNovo) are funded through a sustainable and efficient savings deposit funding base and capital markets as appropriate;
- > RMB International (Mauritius) and the London branch are hard currency platforms for the group's broader Africa and other foreign currency exposures;

- > FirstRand Securities in the UK provides the group's South Africa-based businesses with a highly capitalised and matched principal trading platform and offers access to international market liquidity in the securities and derivative markets in which it is most active; and
- > RMB Securities (USA) and the New York representative office (managed by RMB) are used to maintain the long-term viability of trading securities (in both primary and secondary markets) with institutional investors domiciled in the USA.

Regulatory update

The PA published Directive 11/2022 on 14 December 2022, addressing items of national discretion relating to the LCR. The primary update related to foreign currency liquid assets and their contribution to domestic currency LCR. The directive noted the inclusion of foreign currency denominated level 1 HQLA (subject to an 8% haircut) for purposes of domestic currency LCR, limited to the top 10 most liquid currencies.

The Financial Sector Laws Amendment Act 23 of 2022 (FSLA) was promulgated on 28 January 2022. One of the key provisions of the FSLA is that the SARB will become the designated resolution authority with the necessary powers to operationalise an effective resolution regime. The provisions of the FSLA (including the granting of powers to the SARB to issue resolution standards) will, however, only become operational as outlined in a commencement schedule. This is yet to be gazetted by the Minister of Finance and will:

- > provide for the establishment of the Corporation for Deposit Insurance (CoDI), which will be a separate entity within the SARB mandated to manage a deposit insurance scheme in South Africa, designed to protect depositors' funds and enhance financial stability. The group's initial impact assessments suggest an annual CoDI cost of between R230 million and R280 million for a covered deposit balance of approximately R110 billion; and
- > introduce a new tranche of loss-absorbing instruments, namely flac instruments, which will be subordinated to other unsecured creditors and intended for bail-in during resolution. The cost of flac instruments will depend on final calibration levels and is expected to be incurred on a phased-in basis from the proposed implementation date of 2025. These costs will be incorporated in the group's asset-liability management (ALM) strategies with various transmission mechanisms being analysed and considered as part of the group's FRM process.

Prospects

Looking ahead, the group expects inflation to trend downwards in South Africa, the UK and most of the other countries where it operates. This should allow most central banks to pause their hiking cycles by the second or third quarter of 2023.

Structural constraints in South Africa such as energy, freight rail and port inefficiencies will, however, continue to limit the growth opportunities that should arise from a more constructive inflation and interest rate backdrop. It is also unlikely that Eskom's generating capacity will be sufficiently restored to support GDP growth. It remains to be seen if these constraints present near-term opportunities for private sector investment.

As interest rates stabilise, domestic demand for credit should track in line with pre-pandemic levels. FirstRand expects the supply of savings to remain above the demand for credit given low confidence. The credit loss ratio is expected to continue to normalise.

Higher inflation and interest rates in the UK have resulted in declining house prices and elevated cost-of-living pressures. Given this backdrop, the group expects increased levels of credit losses in the UK operations for the rest of the calendar year.

In broader Africa, fiscal risks will remain. Consolidation efforts in Zambia, Mozambique and Ghana are likely to be driven by each country's respective International Monetary Fund (IMF) programmes.

Given the strength of the balance sheet, and the operational momentum in the group's customer franchises, FirstRand expects its normalised ROE to June 2023 to remain at the upper end of its stated range of 18% to 22%.

The group has been appropriately conservative in its recognition of the impact of the Ghana sovereign debt crisis on its earnings for the first half. Whilst further provisions for this event are not expected, the situation remains uncertain.

The outperformance from the private equity portfolio will not repeat. Notwithstanding the above items, and the potential impact on the impairment charge from deteriorating forward-looking macro assumptions, the operational run rate of the business should deliver underlying earnings growth in the second half similar to that produced in the first half.

Dividend strategy

FirstRand's dividend strategy is to provide its shareholders with an appropriate, sustainable payout over the long term. Given FirstRand's high-return profile and ongoing capital generation, the board is comfortable to pay a dividend at 1.7 times cover representing a payout ratio of 58.8%.

Events after reporting period

The directors are not aware of any material events that have occurred between the date of the statement of financial position and the date of this report.

Board changes

Changes to the directorate are outlined below.

		Effective date
Resignation		
TS Mashego	Independent non-executive director	2 December 2022

Changes to important functions are outlined below.

		Effective date
Appointment		
SP Sibisi	Lead independent non-executive director	2 December 2022

Cash dividend declarations

Ordinary shares

The directors declared a gross cash dividend totalling 189 cents per ordinary share out of income reserves for the six months ended 31 December 2022.

Dividends

Ordinary shares

	Six months ended 31 December	
<i>Cents per share</i>	2022	2021
Interim (declared 1 March 2023)	189.0	157.0

The salient dates for the interim ordinary dividend are outlined below.

Last day to trade cum-dividend	Tuesday 28 March 2023
Shares commence trading ex-dividend	Wednesday 29 March 2023
Record date	Friday 31 March 2023
Payment date	Monday 3 April 2023

Share certificates may not be dematerialised or rematerialised between Wednesday, 29 March 2023 and Friday, 31 March 2023, both days inclusive.

For shareholders who are subject to dividend withholding tax (DWT), tax will be calculated at 20% (or such lower rate as is applicable if a double taxation agreement applies for foreign shareholders).

For South African shareholders who are subject to DWT, the net interim dividend after deducting 20% tax will be 151.20000 cents per share.

The issued share capital on the declaration date was 5 609 488 001 ordinary shares.

FirstRand's income tax reference number is 9150/201/71/4.

B preference shares

Dividends on the B preference shares are calculated at a rate of 75.56% of the prime lending rate of FNB, a division of FirstRand Bank Limited.

review of operations

FNB

FNB represents the group's activities in the retail and commercial segments in South Africa and several countries in broader Africa, with a growing retail offering in Guernsey (FNB Channel Islands). FNB's strategy is underpinned by:

- > a main-banked client strategy anchored to growing and retaining customer relationships using core transactional accounts as a key lever;
- > a digital platform with market-leading interfaces that enable the provision of contextual, cost-effective and innovative integrated financial services offerings to both retail and commercial customers on either an assisted (in-person) or unassisted (self-service) basis;
- > using its deep customer relationships and extensive data insights to offer enhanced customer experiences and inform cross-sell opportunities across the full suite of financial services products, including banking, insurance and investment management;
- > integrating WesBank's vehicle and asset finance offering on platform;
- > providing innovative products to incentivise and grow customer savings and investments and, in turn, the retail deposit franchise;
- > applying disciplined and integrated credit origination strategies that appropriately support customer requirements and affordability across all credit products;
- > utilising eBucks to reward desired customer behaviour, drive platform adoption and enable cross-sell;
- > leveraging its mobile virtual network operator (MVNO) to augment customer value propositions, as well as to provide affordable telecommunication services to customers;
- > managing the physical points-of-presence network to ensure cost optimisation through right-sizing, appropriate coverage from a geographic and segment perspective, and assisting customers with digital adoption; and
- > leveraging traditional and alternative (agency banking – CashPlus) distribution channels in broader Africa.

Cost-to-income ratio (%)	51.4	52.2		53.1
Advances margin (%)	3.90	4.11		4.13

Overview of results

FNB delivered normalised profit before tax (PBT) growth of 16%, and its ROE improved to 42.9%. Performance drivers included a strong rebound in topline revenue resulting from solid customer growth and ongoing cross-sell. FNB's impairment charge increased 9% and the credit loss ratio moved up to 128 bps (December 2021: 126 bps).

Operating expenses increased 12%, driven by:

- > inflation pressures;
- > the investment in FNB's brand refresh;
- > increased headcount, salary increases and repricing of certain technical skills; and
- > project spend to support improved customer experience and service levels on platform.

The cost of maintaining operations given higher levels of loadshedding during the period increased to R40 million (December 2021: R6 million). The weaker rand also led to higher dollar-denominated expenses.

FNB's Nil growth was driven by strong increases in average deposits, both domestically and in broader Africa. Advances growth continued, up 8% period-on-period. Furthermore, the recent interest rate hikes resulted in a significant endowment benefit uplift.

FNB's NIR increased 13%, driven by active customer acquisition and growth in customer activity and transactional volumes. These benefits were offset by fee reductions in both retail and commercial amounting to R140 million and R73 million, respectively. The South African transactional franchise benefited from 15% growth in volumes, good insurance premium growth and a reduction in claims.

CHANNEL VOLUMES

Thousands of transactions	Six months ended 31 December		%	Year ended
	2022	2021		30 June 2022
ATM/ADT	112 513	108 275	4	219 158
Digital*	369 832	331 375	12	673 582
Card acquiring	486 972	391 444	24	819 682
Card issuing	569 841	487 531	17	992 896

* Digital includes app, online and mobile (USSD).

FNB's digital channels continued to deliver volume growth.

This is testament to the success of its strategy to drive customer take-up of digital interfaces and migration to the FNB app (volumes up 19%). Card activity also resulted in good growth in transactional volumes.

Customer segment performance

FNB segments its customer base to identify appropriate and differentiated product offerings. In South Africa, the retail base is split into personal and private customer segments based on relative income. Small and medium-sized businesses and the public sector are serviced by the commercial segment. FNB's broader Africa portfolio represents a mix of mature businesses with significant scale and market share (Namibia, Botswana and Eswatini) and growing businesses in Mozambique, Zambia, Lesotho and Ghana.

FNB grew total active platform users by 940k, with growth in active customers (excluding eWallets) increasing >500k. The table below unpacks growth in customers per segment, platform users and the change in vertical sales index (VSI), which captures cross-sell efforts.

ACTIVE CUSTOMERS AND PLATFORM USERS

Millions	31 December		%	30 June
	2022	2021		2022
Retail	8.04	7.68	5	7.86
– Personal (≤R450k)	6.17	5.99	3	6.13
– Private (>R450k)	1.87	1.69	11	1.73
Commercial	1.20	1.14	5	1.20
Total SA customer base	9.24	8.82	5	9.06
FNB broader Africa	1.98	1.87	6	1.90
FNB active customers	11.22	10.69	5	10.96
eWallets*	6.36	5.95	7	5.95
Total platform users	17.58	16.64	6	16.91
FNB SA VSI	2.94	2.94	–	2.95

* Represent all eWallets without another FNB relationship/product that had at least one transaction in the past six months. In addition, there are 1.82 million eWallets belonging to FNB customers. FNB customer eWallets represent 22% of the total active eWallet base of 8.2 million.

SEGMENT RESULTS

R million	Six months ended 31 December		% change	Year ended 30 June
	2022	2021		2022
Normalised PBT				
Retail	7 572	6 573	15	14 093
Commercial	6 900	5 945	16	12 050
Broader Africa	1 430	1 160	23	2 299
Total FNB	15 902	13 678	16	28 442

Retail's performance benefited from solid NIR growth. NII was supported by both the strong performance of the deposit franchise and healthy advances growth of 7%. The latter was within expectations given the tilt towards low- and medium-risk origination in line with stated strategy. The 5% increase in the active customer base supported this performance, with the private segment growth mainly driven by migration from personal. This reflects FNB's strategy to provide enhanced and appropriate product propositions as customer needs change.

Impairments increased 5% off the back of advances growth and the anticipated customer strain given the rate hiking cycle. Coverage remains prudent considering the economic headwinds expected. Furthermore, retail's commissionable e-commerce turnover amounted to R9.2 billion (including prepaid service providers), (December 2021: R9.1 billion) with active SIM cards in the MVNO up to 879k (December 2021: 844k).

Commercial's performance was underpinned by customer acquisition (+5%) and strong growth in advances and deposits. The performance was further supported by the higher levels of transactional volumes in the merchant acquiring, current account and foreign exchange activities, which benefited NIR. Impairments normalised upwards from a modest base in the prior period.

PBT in broader Africa increased 23%, driven by improved NIR, underpinned by a 6% increase in the active customer base and higher transactional volumes. The 24% increase in NII was supported by balance sheet growth and a positive endowment impact. Impairments increased 1% and the origination strategy, combined with good collections efforts, continued to show positive results. The portfolio's overall performance benefited from resilient results from Botswana, Namibia and Zambia.

Ghana, which is still subscale, has been significantly impacted by tough macroeconomic conditions and the sovereign debt default.

SEGMENT ANALYSIS OF ADVANCES AND DEPOSIT GROWTH

Segments	Deposit growth		Advances growth	
	%	R million	%	R million
Retail	8	24 605	7	23 488
– Personal (≤R450k)	5	4 035	(6)	(2 953)
– Private (>R450k)	8	20 570	10	26 441
Commercial	15	52 981	10	9 916
Broader Africa*	5	2 890	7	3 614
Total FNB	11	80 476	8	37 018

* On a local currency basis, growth in deposits was 7% and advances 9%.

FNB's overall lending approach is informed by internal and external data analysis related to affordability indicators, which still suggest that low- to medium-risk customers have capacity for credit and a higher propensity to take up a broader range of financial services products.

Retail advances increased 7% period-on-period, driven by residential mortgages (+8%), with new production up 9% period-on-period. Growth in unsecured lending, particularly card and FNB personal loans, picked up but was offset by the continued contraction of the DirectAxis personal loans book (down 4%) and the runoff of the Covid-19 relief book. Excluding the relief book and DirectAxis, FNB personal loans grew 10% and card advances also increased 10%. Customer preference for the new Fusion product has resulted in lower overdraft advances. Revolving loans increased 2% as risk appetite for this product was tightened.

Commercial advances increased strongly, in line with a deliberate sector focus, specifically in the agriculture, public sector, Islamic banking and specialised finance lending portfolios.

Broader Africa advances increased 7%, driven by good growth across the portfolio, particularly in Botswana.

Overall deposit growth of 11% was supported by innovative product offerings across all segments.

Credit performance

FNB's credit impairment charge increased 9% to R3 192 million (December 2021: R2 939 million), with the credit loss ratio at 128 bps (December 2021: 126 bps), due to:

- > a net increase in modelled FLI requirements as the macro outlook weakened;
- > an uptick in arrears in retail, which was in line with expectations and the interest rate cycle; offset by
- > good collections efforts; and
- > lower stage 3 inflows and good curing in all portfolios.

ANALYSIS OF IMPAIRMENT CHARGE

<i>R million</i>	Six months ended 31 December		% change	Year ended 30 June
	2022	2021*		2022
Performing book provisions	193	272	(29)	(407)
NPL provision	(93)	(1 086)	(91)	(2 313)
Credit provision increase/(decrease)	100	(814)	(>100)	(2 720)
Gross write-off** and other	5 118	5 799	(12)	11 765
Modification loss	325	366	(11)	591
Interest suspended on stage 3 advances	(1 425)	(1 307)	9	(2 566)
Post write-off recoveries	(926)	(1 105)	(16)	(2 132)
Total impairment charge	3 192	2 939	9	4 938

* December 2021 has been restated due to the reallocation of ABF customers that bank with FNB from FNB commercial to WesBank corporate.

** Write-off of gross balances excluding prior period provisions held, which have been recognised in the income statement over various reporting periods.

FNB's approach to provisioning remains appropriately prudent given the anticipated economic cycle. Forward-looking economic indicators deteriorated when compared to June 2022, resulting in a net increase of FLI provisions. These indicators and weightings of the scenarios are disclosed on pages 212 to 221. However, the provisions related to the stress scenario at June 2022 were maintained given the recent global and local macro uncertainties.

Collections across all product portfolios performed well. Arrears are trending up but at lower levels than anticipated. The current debt relief portfolio continued to perform better than expected and specific debt-relief outstanding advances amounted to R1.5 billion at 31 December 2022 (December 2021: R2.4 billion). These impacts, coupled with low- and medium-risk origination, resulted in overall performing coverage moderating downward to 2.49% (December 2021: 2.82%).

The NPL ratio reduced to 6.22% (December 2021: 7.22%). This improvement reflects the effectiveness of FNB's credit management strategies and resulted from lower NPL inflows and good customer curing due to focused collections. NPL coverage remained conservative at 51.0% (December 2021: 51.3%).

Insurance

PBT from FNB's insurance activities increased 60%, driven by good premium income, coupled with reduced claims. These benefits were offset by additional investment into the short-term insurance business and costs associated with the rollout of comprehensive non-life products.

Life's new business APE increased 22%, with premiums up 16%. Credit life new business APE increased 65%, with a positive impact from the DirectAxis-branded loans cover, which is now being written on the group's life licence.

NEW BUSINESS APE

R million	Six months ended 31 December		% change	Year ended 30 June
	2022	2021		2022
Core life (including funeral)	577	529	9	1 090
Underwritten	139	139	–	276
Commercial	139	127	9	139
Standalone products	855	795	8	1 505
Credit life*	458	278	65	665
FNB life	1 313	1 073	22	2 170
FNB short-term	384	122	>100	231

* December 2022 figure includes R152 million of new business APE for DirectAxis business which has been written on the group's life licence since January 2022.

In the short-term insurance business, policies increased to c. 275k (up 13%) with good growth in new business APE. This resulted in a reduction in operating losses period-on-period. Gross premium income was up >100% period-on-period, driven by continued sales of homeowners' cover and motor insurance.

Wealth and investment management

The FNB wealth and investment management (WIM) strategy focuses on cross-selling investment products and solutions to FNB's retail customers. The retirement annuity, offered on the FNB app, and the Shares Zero product were launched in the prior year and continued to grow. Overall investment accounts grew 3% to 604k with penetration of the FNB customer base at 8%, mainly in the private segment.

The number of active share trading accounts remained flat at 236k, however, NIR was lower than in the prior period as volumes traded were 28% lower, in line with overall JSE trade activity.

Total WIM assets declined 3% period-on-period as customers moved to cash and fixed income funds, looking for certainty. Many of the funds were in the first and second quartile of investment performance.

WIM ASSETS

R million	Six months ended 31 December		% change	Year ended 30 June
	2022	2021		2022
Assets under management (AUM)	65 130	70 339	(7)	64 837
FNB Horizon series AUM	6 380	5 158	24	4 550
Assets under advice	70 600	76 711	(8)	69 573
Assets under administration	68 997	67 123	3	67 645

Total WIM assets	295 344	305 193	(3)	286 111

Platform

FNB continues to invest in its enterprise-wide integrated financial services platform and customers can fulfil most of their financial services requirements digitally. The platform enables customers to engage via assisted interfaces (e.g. points of presence and call centres) and unassisted interfaces (mobile banking (USSD), online banking, the FNB app, ATMs and ADTs).

The platform strategy is that, regardless of the interface, the platform used in all interactions is the same. The platform also offers contextual customer experiences through an ecosystem of offerings called nav». These are designed to assist customers in managing key financial and lifestyle needs. The platform also enables the purchase of non-banking services such as electricity, mobile data and digital vouchers.

Along with the recent brand refresh, FNB launched some innovative payment solutions listed below:

- > Auto Pay, which provides the ability to monitor and inform clients when it is predicted that they would not be able to honour a recurring payment. Thirty per cent of the customers who are being sent notifications have had unpaid debit orders (UDOs) in the past. Before the campaign, these customers had 1.4 UDOs each on average, and this reduced to 1.1 UDOs per customer. It also provides customers with the ability to set rules on their accounts that will ensure that they honour their payments.
- > Instant Pay is a first-to-market real-time payment product that went live on 16 October 2022. Payment is made to a recipient's 16-digit bank card number, which does not require an account number, bank name or branch code. As at 31 December 2022, Instant Pay processed 65k payments to the value of R50 million.

Key platform highlights for the six months ended 31 December 2022 are outlined below.

- > Since the launch on the FNB app, 3.9 million virtual cards have been activated and R15.3 billion in value transacted. The virtual card is key to facilitating more secure e-commerce transactions.
- > Device payments (using Apple or Android) accounted for 41.9 million transactions worth R16.2 billion.
- > Approximately 8.2 million eWallet users accounted for cash withdrawals of R23.9 billion.

- > nav»Money provides customers with simple, easy-to-use money management tools which help them track their spend, view credit scores and more. It had 3.3 million users at 31 December 2022, up 33% period-on-period.
- > nav»Home has placed c. 40k families in homes and paid out R46.6 billion in loans since inception. Estate agent functionality was activated on the app in FY21 and 146 estate agents have been onboarded, with 1 756 current listings.
- > nav»Car had 848k vehicles loaded in the garage at the end of December 2022, and WesBank financed R406 million in vehicle loans through this channel. CarP2P was launched recently, with 186 active listings at 31 December 2022.
- > Commissionable e-commerce turnover and fulfilment on platform (i.e. electricity, mobile and digital vouchers sold) amounted to R9.2 billion, up 1%. Approximately three million customers use these services.
- > eBucks travel sales increased to R450 million (December 2021: R241 million).
- > Digitally active customers grew to 6.73 million (December 2021: 6.21 million). Digital includes mobile banking (USSD), online banking and the app.
- > The banking app active transacting base exceeded 5 million customers and reached new monthly records of 103 million logins in October 2022. Monthly app logins were 29% higher than in December 2020 and 12% higher than in December 2021.
- > Digital logins totalled 878 million, with online and mobile banking (USSD) logins of 88 million and 187 million, respectively. The app contributed 603 million logins.
- > Total transactional volumes through digital interfaces included 82 million for online banking, 274 million (+19%) for the banking app and 15 million for mobile banking (USSD), highlighting the scalability of FNB's platform.
- > In broader Africa, card transactions increased 24% from 39.1 million to 48.5 million and digital penetration increased from 32.8% to 40.3%.

WesBank

WesBank represents the group's asset-based finance activities in the retail, commercial and corporate segments in South Africa. It is one of the leading providers of vehicle finance and also provides fleet management services.

WesBank's strategy is underpinned by:

- > leveraging its long-standing model of partnering with motor manufacturers, suppliers and large dealer groups and fulfilling motor financing requirements at point of sale;
- > leveraging and integrating into the FNB platform to offer vehicle and asset-based finance solutions to existing FNB retail and commercial customers, further entrenching main-banked relationships;
- > applying disciplined credit origination strategies that appropriately support customer requirements and affordability across asset-based credit products; and
- > utilising FNB's loyalty programme, eBucks, to reward desired customer behaviours and drive platform adoption.

Following the robust recovery in the domestic new vehicle market in 2021, when sales increased 22% compared to the pandemic-affected 2020, aggregate new vehicle sales recovered a further 14% to 528 963 units in calendar year 2022.

The market continues to be highly competitive with margins remaining under pressure, with customer demand and market dynamics driving product risk towards higher loan-to-value levels and balloon structures.

Pleasingly, new business production was up 28% on the comparative period, with WesBank's origination strategy still tilted towards low- and medium-risk and FNB main-banked customers. This growth trend is expected to continue, and main-banked customers now represent 63% of both the retail, and commercial and corporate asset finance lending portfolios.

New business volumes in WesBank's associates, Volkswagen Financial Services (VWFS) and Toyota Financial Services (TFS), increased 35%, following the resumption of production at the Toyota factory and targeted marketing strategies. Advances growth was supported by new competitive vehicle models and innovative product offerings.

The strong increase in production led to an increase in total advances of 9% period-on-period.

WESBANK FINANCIAL HIGHLIGHTS

<i>R million</i>	Six months ended 31 December		% change	Year ended 30 June
	2022	2021		2022
Normalised earnings	929	873	6	1 604
Normalised profit before tax	1 278	1 232	4	2 270
Total assets	154 906	142 535	9	145 798
Performing advances	147 007	132 397	11	137 376
Stage 3/NPLs as a % of advances	4.28	5.96		4.92
Credit loss ratio (%) of average advances	1.01	1.08		0.98
ROE (%)	21.0	20.5		18.6
ROA (%)	1.24	1.22		1.11
Cost-to-income ratio (%)	52.9	54.3		57.5
Net interest margin (%)	2.65	3.09		2.99

WesBank's normalised earnings increased 6%, with normalised PBT up 4%. Strong new business volumes partially offset some of the margin pressure in Nil.

Operational NIR grew 7%, driven by increased business volumes and production, sustained rental income and card and maintenance commissions in the fleet business, and rising levels of early terminations in the lending businesses. This was partially offset by lower insurance income in MotoVantage.

The credit management strategy, including collections, continues to perform well and the focus on low- and medium-risk customers has resulted in the WesBank credit loss ratio reducing to 101 bps (December 2021: 108 bps), although it is marginally up since June 2022 (98 bps) given the expected new business strain.

Operating expenses remain well managed, decreasing 3% period-on-period, despite inflationary increases in staff costs and continued investment in integrating with FNB's digital platform.

BREAKDOWN OF PRE-TAX PROFITS BY SEGMENT*

R million	Six months ended 31 December		% change	Year ended 30 June
	2022	2021		2022
Normalised PBT				
Retail VAF**	894	937	(5)	1 768
Corporate and commercial	384	295	30	502
Total WesBank	1 278	1 232	4	2 270

* Refer to additional segmental disclosure on page 56.

** Includes MotoVantage.

Overall normalised retail vehicle asset finance (VAF) PBT was down 5%. The performance was significantly affected by reduced income from associates, which resulted from the non-repeat of large credit impairment releases in the prior period in both associates, and lower insurance profits.

Pleasingly, corporate and commercial's normalised PBT increased 30%, as a result of a turnaround in the fleet business, following a period of heavy investment in capacity. An additional benefit was the strong performance in the asset-based finance (ABF) business, which delivered good balance sheet growth. Whilst the credit loss ratio increased 50 bps period-on-period, this was within expectations and on the back of a net release in the prior period as the business normalised its pandemic overlays.

Total impairment charge	751	759	(1)	1 402

* December 2021 has been restated due to the reallocation of ABF customers that bank with FNB from FNB commercial to WesBank corporate.

** Write-off of gross balances excluding prior period provisions held, which have been recognised in the income statement over various reporting periods.

WesBank's credit impairment charge marginally reduced to R751 million (December 2021: R759 million), with the credit loss ratio reducing to 101 bps (December 2021: 108 bps). This was driven by:

- > a net increase of provisions due to modelled FLI requirements;
- > good curing in WesBank's debt relief portfolios and the subsequent release of the related provisions;
- > improved collections on repossessions which resulted in lower write-offs; and
- > a strong payment performance, especially in the corporate portfolio.

NPLs declined 22% to R6.6 billion (December 2021: R8.4 billion).

Performing coverage remained stable at 1.90% (December 2021: 1.88%). NPL coverage increased to 52.5% (December 2021: 47.2%) and remains prudent due to the current macroeconomic environment and the long timeframe to recover NPL balances.

RMB

RMB represents the group's activities in the corporate and institutional segments of South Africa and on the broader African continent. In addition, it has niche offerings in the UK and India, and a broker-dealer business and representative office in the USA.

RMB's strategy is to ensure delivery of integrated financial services value propositions to corporate and institutional clients. These propositions span across a comprehensive portfolio of activities including a leading lending and advisory franchise, an established market-making business which is scaling its distribution product offering, a competitive transactional banking and securities services offering, a best-in-class private equity business and a growing asset management capability. This diversified business portfolio, coupled with a disciplined approach to balancing risk, return and growth, is designed to deliver sustainable high-quality earnings, balance sheet resilience and superior returns.

RMB delivered 25% growth in normalised PBT, reflecting a resilient operational performance across the portfolio, characterised by:

- > investment banking benefiting from robust core average advances growth of 21% and resilient fee income;
- > the transactional banking business delivering 15% growth in average deposits and sustained growth in primary-banked clients in a highly competitive environment;
- > strong growth in private equity's gross annuity income, and period-on-period outperformance from a material realisation; and
- > a mixed performance from the markets business with resilient growth in revenues, however, overall performance was impacted by investment spend.

Total costs increased 13%, due to above-inflation fixed staff costs and headcount increases. Overall cost growth was further negatively impacted by significant currency devaluation and elevated inflation levels in many of the jurisdictions outside of South Africa.

Investment costs increased 37%, driven by:

- > continued modernisation of core platforms;
- > enhanced digital offerings to clients;
- > platform investment in the broader Africa franchise; and
- > the establishment of a presence in the USA as part of the broader Africa strategy.

ANALYSIS OF IMPAIRMENT CHARGE

** Write-off of gross balances excluding prior period provisions held, which have been recognised in the income statement over various reporting periods.

The credit quality of RMB's core lending portfolio remained resilient despite the constrained macro environment. Surveillance and watchlists reflected improvements compared to December 2021. As expected, the current reporting period did see the migration of a limited number of counters to NPL status due to the lingering strain in specific sectors of the economy and a worsening macro environment. As a result, RMB raised new impairments on the core lending portfolio during the period. The impairment charge reflects the benefit of a debt-to-equity restructure on a specific private equity counter during the period, which resulted in a net R105 million release.

RMB believes its consistent and prudent provisioning approach remains appropriate, with the performing book coverage ratio against core advances at 123 bps (December 2021: 193 bps; June 2022: 141 bps).

** Up 13% in constant currency terms.

The broader Africa portfolio remains key to RMB's growth and delivered strong growth in PBT to R1.65 billion (which represents 25% of RMB's overall PBT). Strong NII growth of 36% was driven by robust advances growth of 46%. Ongoing primary-banked client acquisition assisted average deposit growth, and deposit margins improved on the back of interest rate increases, which bolstered liability NII growth. Markets' activity benefited from a recovery in Nigeria, a strong global FX performance from increased volumes given currency volatility, and a good performance in Mozambique. Structuring and secured financing in West Africa provided a meaningful uplift as did emerging market distribution activities to the UK client base.

BREAKDOWN OF PBT CONTRIBUTION

R million	Six months ended 31 December		% change	Year ended 30 June
	2022	2021		2022
Banking	4 203	3 557	18	7 463

Private equity	1 282	332	>100	1 186
Other*	(321)	(162)	98	(315)
Total RMB	6 475	5 181	25	11 615

* Other includes support and head office activities.

The banking business delivered good growth of 18% in PBT. New business origination underpinned investment banking's performance, resulting in average advances increasing 21% period-on-period. This translated into strong NII growth and supported robust structuring and commitment fee income, with advisory and trade benefiting from increased market activity. The principal investment portfolio delivered resilient revenue, although NIR was negatively impacted by impairments taken to de-risk specific exposures. As the macro environment remains constrained, the business has retained adequate provisions to buffer against negative credit migrations and defaults.

Corporate transactional banking achieved strong domestic deposit growth of 16% due to the ongoing focus on growing operational balances through increased primary-banked relationships, increasing levels of cross-sell and significant momentum in the scaling of investment deposit offerings. Margins benefited from positive endowment and margin uplifts on certain products. NIR trended down, impacted by the competitive pricing landscape and higher association fees, as well as reduced electronic funds transfer volumes and associated fees, despite higher cash and merchant services volumes from the onboarding of strategic clients. The broader Africa portfolio delivered average deposit growth of 5% and a resilient NIR performance as the business continued to execute on client acquisition strategies.

The markets business saw good increases in client activities in its broader Africa portfolio, offset by significant shifts in market dynamics and reduced client flows domestically. Spread

compression and lower volatility, which resulted from the implementation of the MPIF, reduced funding margins. As outlined earlier, the ongoing investment strategy weighed on profitability, which reduced 10% period-on-period.

Fixed income and credit trading improved on the back of the stabilisation of and improvement in credit markets compared to the prior period, which saw significant risk aversion by investors and reduced liquidity on the back of inflation uncertainty. Locally, fixed income benefited from increased client flow, but the overall performance was moderated due to a reduction in market funding spreads.

The global foreign exchange business benefited from resilient client volumes relating to hedging activities, with a material improvement noted in Mozambique. Overall, the performance from FX and commodities reflects the outperformance in the prior period on the back of elevated client hedging activities in response to dislocations in FX and global commodity prices.

Ashburton Investments was incorporated into RMB to enable the distribution of asset management product offerings to corporate and institutional clients. The business benefited from increased inflows period-on-period as a result of leveraging RMB's distribution capabilities and an improved investment performance. AUM in SA grew 11% to R93.6 billion over the six-month period (June 2022: R84 billion), driven by growth in fixed-income, multi-asset and equities, and liability-driven investment (LDI) products. The outflows in Ashburton Jersey resulted in overall AUM growing 9%.

Private equity posted an excellent result for the period under review, benefiting from a significant realisation contributing gross income of >R1 billion and a net earnings benefit of c. R800 million. The performance was further enhanced by strong gross annuity income growth of 18%, due to the improved operational performances from portfolio companies. The current period provided several new acquisition opportunities resulting in the business investing c. R850 million. The quality and diversity of the portfolio is reflected in the 7% increase in unrealised value since June 2022 (on a like-for-like basis excluding the realisation during the period) to R5.2 billion (December 2021: R4.8 billion; June 2022: R5.9 billion).

UK operations

The UK operations include Aldermore and the MotoNovo front and back books. Aldermore is a multi-product specialist lender, with a focus on providing straightforward lending and savings products to SMEs, homeowners, landlords and individuals. It seeks to meet the needs of people who are underserved by mainstream providers. MotoNovo is a market leader in motor finance.

The UK operations are funded primarily by retail deposits from UK savers. With no branch network, Aldermore serves customers and intermediary partners online and telephonically.

* Write-off of gross balances excluding prior period provisions held, which have been recognised in the income statement over various reporting periods.

The current strategic priorities in the UK operations are as follows:

- > focus on property finance, structured and specialised finance, auto loans and savings, which all represent deep profit pools in the UK market and Aldermore's current market share in most of these asset classes (other than auto loans) is small;
- > exit certain subscale business lines;
- > modernise technology/platforms; and
- > continue to further embed FirstRand FRM disciplines.

Execution on these priorities can be seen in the performance for the period under review.

The UK operations delivered solid loan book growth supporting profitability and ROE. Normalised pre-tax profits increased 11%, driven by 9% growth in advances to £15.9 billion (December 2021: £14.6 billion) and 16% growth in customer deposits to £15.2 billion (December 2021: £13.1 billion). The UK operations produced an ROE of 11.9% (December 2021: 11.8%).

MotoNovo's performance reflects the challenging operating environment and ongoing remediation efforts related to the previously reported NOSIA operational event.

Advances growth continued to be driven by retail mortgages, MotoNovo and business finance lending. The latter improved strongly (+10%) as a result of increased support for SME customers returning to investment following the pandemic, and a strategic pivot towards larger-sized deals. Total MotoNovo advances grew 13%, reflecting continued high demand in the second-hand car market. Retail mortgage advances increased 7% or >£400 million since June 2022.

Customer savings deposits grew 16%, with growth across all channels, particularly personal savings, as the business optimised the deposit mix whilst actively responding to market and customer demand. Customer savings deposits now represent 81% of total liabilities (December 2021: 79%), reducing the loan-to-deposit ratio to 102% (December 2021: 110%).

NII increased 16%, reflecting current and prior year lending growth and an improvement in NIM due to the temporary widening of deposit margins, which offset ongoing lending margin pressure.

The impairment charge increased to £52.5 million (December 2021: £14.3 million), which was expected given new business strain and the deteriorating macroeconomic environment. This also led to an increase in arrears and NPLs.

NPLs as a percentage of advances decreased to 2.66% from 2.96% in the prior period following the curing of Covid-19 relief NPLs. Since June 2022, this ratio has ticked up marginally. The NPL coverage ratio increased to 39.5% (December 2021: 37.1%), reflecting a combination of paying customers migrating out of stage 3 and management maintaining a prudent level of coverage due to the uncertain economic outlook.

The credit loss ratio increased to 67 bps (December 2021: 20 bps), driven by new business strain and the worsening macro environment.

Performing coverage increased from 0.74% to 1.07%, which reflects the uncertain economic outlook and a prudent approach to provisioning.

Fair value gains in the hedging portfolio amounted to £6.7 million (December 2021: £1.1 million loss) as a result of significant macro volatility and rapidly rising yield curves, most notably in September following the mini budget. However, the political situation and rates began to stabilise in the second quarter.

Operating expenses increased 2% to £145 million (December 2021: £142 million), mostly relating to inflationary impacts and investment spend incurred on systems, processes and people. Despite these pressures, given the healthy income growth, the cost-to-income ratio improved to 46.5% (December 2021: 54.1%).

Business unit performance highlights

Retail mortgages

- > New business origination picked up strongly (+114%) to £1.0 billion (December 2021: £0.5 billion) largely driven by limited edition offerings in buy-to-let and competitively priced owner-occupied mortgage rates.
- > Advances to customers increased to £7.7 billion (December 2021: £7.2 billion).
- > PBT, however, declined to £54.5 million (December 2021: £68.5 million) due to a significant increase in funding costs, reflecting Aldermore's inability to reprice current loan offers given the quantum and velocity of interest rate hikes.

MotoNovo

- > New business origination increased 8% to £1.1 billion (December 2021: £1.0 billion) due to a continued buoyant second-hand car market.
- > Advances to customers grew 13% to £4.5 billion (December 2021: £4.0 billion).
- > PBT fell slightly to £19.2 million (December 2021: £20 million) impacted by an increase in arrears due to the worsening macroeconomic outlook and ongoing remediation activities relating to NOSIAs.

Business finance

- > New business origination was up 9% to £1.0 billion (December 2021: £0.9 billion).
- > Strong growth in advances continued, up 10% to £3.7 billion (December 2021: £3.4 billion).
- > PBT, however, declined to £57.4 million (December 2021: £73.8 million), largely driven by higher funding costs and an increased impairment charge, reflecting the deteriorating macroeconomic environment.

Savings

- > Personal savings remained the largest deposit portfolio, with 15% growth period-on-period to £10.5 billion (December 2021: £9.2 billion).
- > Business savings increased 17% to £2.7 billion (December 2021: £2.3 billion).
- > Corporate treasury deposits increased 22% to £2.0 billion (December 2021: £1.6 billion).
- > Over the last 12 months, the deposit mix has shifted towards tax-free individual savings accounts (ISAs) and non-maturity deposit (NMD) products as customers sought more flexibility in the challenging economic environment.
- > The temporary widening of margins is reflected in Central functions, which reduced the net loss.

[#] In the UK operations management view, shown in the table above and on pages 57 to 59, Aldermore refers to Aldermore excluding MotoNovo front book. MotoNovo refers to the standalone performance of MotoNovo, which includes the front book and back book. This differs from the segment report disclosed on pages 44 to 55, as MotoNovo's front book is included under Aldermore and MotoNovo's back book is included in the Centre (including Group Treasury).

[†] After the dividend on the contingent convertible securities of R88 million (£4 million) (December 2021: R88 million and £4 million; June 2022: R174 million and £8 million).

[‡] Includes Group Treasury.

Additional information on internal restructures

for the six months ended 31 December 2021

Internal restructures took place during the period to better facilitate the execution of group strategy. These do not impact like-for-like comparisons at group level, but they are material to certain individual segments. The segmental disclosure has been updated for the following:

- > Transfer of the revolving facilities from retail other to personal loans within FNB retail.
- > The ABF activities of customers that bank with FNB have been reallocated from FNB commercial to WesBank corporate.
- > A restatement in disclosure shows core lending advances which exclude assets under agreements to resell.
- > A restatement within the Centre reflects the net presentation of derivative assets and derivative liabilities with the London Clearing House (LCH).

analysis of results

Net interest income (before impairment of advances)

Net interest income (before impairment of advances) – up 13%

Since 2017, the group implemented certain ALM strategies to protect earnings and manage interest rate risk through the cycle. During the rate cutting cycle, these strategies mitigated the negative endowment impact by approximately 50% in the 2021 and 2022 financial years. In the current interest rate hiking cycle, the group’s NII growth rate will therefore only benefit from c. 50% of the endowment uplift.

Net interest income

R million

CAGR 6%

Repo rate

The average endowment book for the year was R335 billion excluding UK operations. The average endowment book for the UK operations was £200 million. On average, rates were 241 bps higher in the current period, which translates into a gross positive endowment impact of approximately R4 billion (R4.5 billion including UK operations) excluding the ALM strategies (i.e. gross impact).

MARGIN CASCADE TABLE

31 December 2022 closing normalised margin including UK operations	1 706 146	37 681	4.38	4.37	4.40

* The methodology used to prepare the margin cascade was updated during the current period to align with industry practice and to reflect the drivers of the margin more appropriately. In prior periods, the group rebased the opening NIM to take into account the impact of the change in average interest-earning assets, based on the prior year NII earned, and thereafter the movements in the income statement were determined on the current year interest-earning assets. The group no longer calculates a rebased NIM, but instead includes the change in the average interest-earning assets based on last year's NIM as an adjustment to NII and then reflects the movements as a result of pricing and mix changes and other impacts.

Net interest income (before impairment of advances) continued

* Comparative information has been represented in order to provide better attribution of NII by nature of activity. The total NII has remained unchanged.

** Includes NII related to credit cards, overdrafts and transactional deposit products, and deposit endowment.

Other includes negative endowment, e.g. fixed assets.

KEY DRIVERS

- > The overall group NII increase was driven by growth in deposits, including net endowment, and advances.
- > Average interest rates moved up by 241 bps period-on-period to 5.97% (December 2021: 3.56%), following three hikes in the SA repo rate in July 2022 (75 bps), September 2022 (75 bps), and November 2022 (75 bps), which benefited endowment-related NII. A portion of the endowment benefit was captured in previous periods through the group's ALM strategy.
- > Lending NII increased, driven by strong growth in average advances in RMB CIB (21% increase in core lending period-on-period). Average retail and commercial advances in FNB and WesBank grew 6%. The absolute level of lending NII growth reflects the continued tilt towards good-quality, low- and medium-risk credit origination.
- > The increase in NII on transactional balances and investment deposits was driven by customer growth and related increase in volumes, particularly in card, and the strong deposit gathering by the deposit franchises. The current and savings accounts deposits benefited from net endowment.
- > Capital endowment NII, including ALM strategies described on page 80, increased in the reporting period due to higher average interest rates benefiting overnight interest earned. This was offset by lower capital endowment following the special dividend paid for the year ended June 2022.
- > The NII within Group Treasury, Centre and other decreased over the period and was driven by:
 - lower returns generated on liquid assets in the current period as market returns moderated;
 - negative movements in accounting mismatches, which pull to par over the life of the instruments; and
 - basis costs increased in the period and was partially offset by foreign currency carry cost.
- > FNB broader Africa's margins increased largely due to endowment benefits from the interest rate increases and growth in both advances and deposits. The broader Africa portfolio is not included in the group's ALM strategies.
- > UK operations NII increased, driven by net lending growth, strong deposit growth and interest rates changes benefiting the cost of funding and thereby margins.

Net interest income (before impairment of advances) continued

Core lending advances – up 11%

Gross advances growth by business

R million

The table below unpacks gross advances growth, showing the impact of the core lending advances, assets under agreements to resell, and the impact of currency movements on the UK operations and the RMB cross-border book.

* If the exchange rate (£: R20.46 and \$: R16.98) had remained unchanged from 31 December 2021 (£: R21.47 and \$: R15.89).
For further information on the exchange rate, refer to page 238.

KEY DRIVERS

- > Advances growth continued to gain momentum. The RMB CIB portfolio contributed significantly to the increase in core lending advances, supported by growth in residential mortgages and WesBank.
- > Since June 2022 growth in residential mortgages has slowed, as expected given the higher interest rate environment. Unsecured lending growth was driven by card and FNB personal loans, partially offset by declining volumes in the DirectAxis portfolio which has been impacted by legislation and marketing channel changes.
- > WesBank retail VAF produced period-on-period growth supported by higher application volumes and increased approval rates. In WesBank commercial the growth was driven by the ABF portfolio and the onboarding of new clients in the dealer funding solutions (DFS) book.
- > In the FNB commercial segment, advances growth continued to be strong and aligned to the strategy to originate new business tactically in those sectors showing above-cycle growth.
- > RMB CIB advances growth was largely driven by existing clients drawing down on their facilities as well as new clients in the corporate bank. Origination continued to lean towards better-rated counterparties in the lower to medium volatility sectors, driven by increased credit appetite on the part of corporates. The growth was concentrated in the financial institutions, mining, telecommunications, real estate and energy sectors. The rand depreciated against the US dollar period-on-period, positively impacting reported growth in the cross-border book.
- > FNB broader Africa advances increased both in rand and local currency terms on the back of focused lending strategies. The largest contributors to this growth were Namibia, Botswana and Zambia.
- > In the UK operations all portfolios delivered growth in advances. MotoNovo's growth resulted from continued high demand in the second-hand car market. Aldermore's retail advances were driven by strong origination growth from a solid pipeline built up towards the end of the 2022 financial year. Growth in the commercial portfolio was due to increased support for small and medium-sized enterprise customers returning to investment following the pandemic, and a strategic pivot towards larger-sized deals.
- > Assets under agreements to resell have grown since June 2022 due to an increased appetite for liquidity in the market, which the group was able to capitalise on but are marginally lower than the prior period.

Net interest income (before impairment of advances) continued

* December 2021 was restated due to the reallocation of revolving facilities from the retail other segment to personal loans.

** December 2021 was restated due to the reallocation of ABF customers that bank with FNB from FNB commercial to WesBank corporate.

Margin analysis is based on net interest income as a percentage of average advances/deposits. Net interest income is calculated as the difference between the client rate (earned or paid) and the transfer pricing rate (earned or paid by Group Treasury). The average margin is, therefore, net of funds transfer pricing.

The group operates a transfer pricing framework that incorporates base interest rates, statutory costs and benefits into product pricing, as well as any regulatory costs for all significant business activities on- and off-balance sheet. This aligns liquidity risk-taking incentives of individual business units with the liquidity risk exposure created for the group as a whole.

Where fixed-rate commitments are undertaken (fixed-rate loans or fixed deposits), transfer pricing will also include the cost of transferring the interest rate risk.

Net interest income (before impairment of advances) continued

KEY DRIVERS

Advances margins

- > Overall advances margins reflect portfolio mix changes and pricing for low- and medium-risk advances and stronger growth in lower-margin secured and corporate portfolios relative to unsecured portfolios. The market remained highly competitive for these customers, adding to the margin pressure.
- > WesBank retail VAF margins also reflect the focus on low- and medium-risk customers and competitive pricing pressures, together with the ongoing run-off of the higher margin fixed rate advances.
- > FNB commercial margins were impacted by the decline in overdraft margins owing to new business and limit increases tilting toward low- and medium-risk customers. Similarly, WesBank corporate margins decreased due to the migration tilt.
- > RMB margins decreased, driven by a shift in book composition (non-ZAR advances) to lower margin products (ZAR and term), and ongoing competitive margin pressure. This was largely offset by strong growth in the long-term portfolio in high yield sectors.
- > FNB broader Africa advances margins remained flat, despite margin expansion in Botswana on the back of improved pricing. This was offset by margin compression in Ghana and Lesotho, driven by increased funding costs and regulatory limits imposed on customer rates.
- > Aldermore's net interest margin increased driven by temporary deposit margin expansion, which offset ongoing lending margin pressure. MotoNovo margins continue to be affected by the ongoing remediation of the NOSIA operational event.

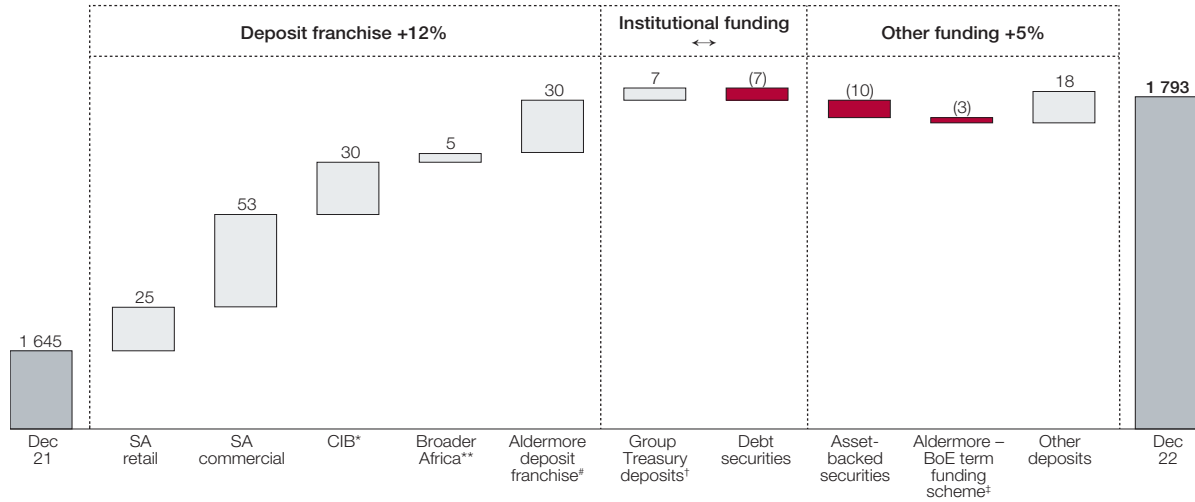

Deposit margins (refer to page 90)

- > FNB SA retail and commercial deposit margins increased mainly due to the endowment benefit from rising interest rates.
- > FNB broader Africa margins were supported by an improvement in product mix, with increased current and savings deposits, along with the endowment benefit from rising interest rates.
- > RMB CIB deposit margins benefited from the strategy of attracting and retaining primary banked clients which resulted in a number of key client wins coupled with increases in overnight funding rates and higher operational margin due to market trends. The increase was somewhat offset by the increase in lower-margin investment products.
- > RMB broader Africa deposit margins expanded due to interest rate hikes and a favourable shift in product mix across certain jurisdictions (from US dollar to local currency balances earning higher margins).

Funding – up 9%

Funding growth by segment

R billion

* Includes South Africa and the London branch.

** Broader Africa deposits include CIB deposits related to the broader Africa subsidiaries.

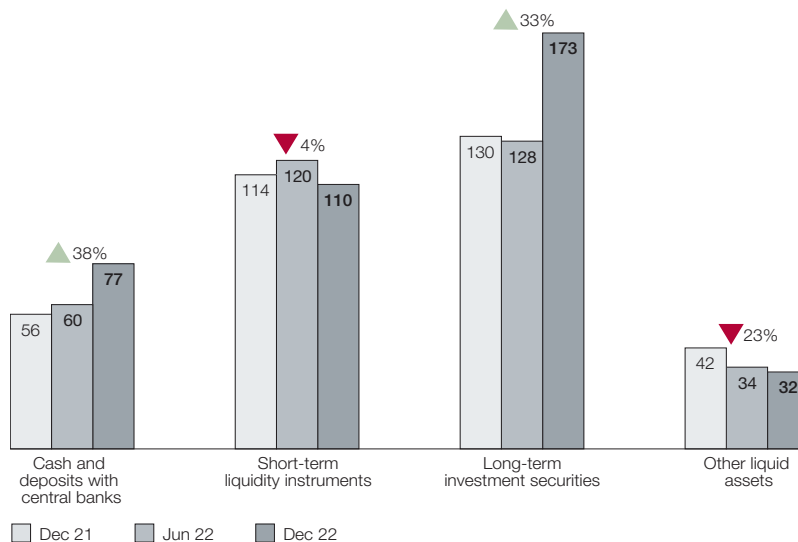

† The Aldermore savings deposit franchise increased 16% to £15 billion.

‡ Group Treasury deposits include the SARB funding facility related to the South African Covid-19 government-guaranteed loan scheme and the government's Bounce-Back Scheme.

‡ Aldermore's utilisation of the BoE term funding scheme decreased 5% to £1.2 billion (in local currency).

Liquidity management by investment type*

R billion

* Liquidity is calculated as a simple average of 92 days of daily observations over the six months ended 31 December 2022 for FirstRand Bank South Africa and the London branch, as well as Botswana and Namibia. Liquidity of the remaining banking entities, including Aldermore, and the India and Guernsey branches, are based on the quarter-end values.

* Restatements are due to refinements in FNB's processes.

** The net UK operations margin is shown in the previous table under advances.

Note: Average balances are daily averages for FNB and WesBank, and monthly averages for RMB.

DEPOSITS AND FUNDING KEY DRIVERS

Deposit franchise

- > The increase in FNB's average deposit base resulted from customer and balance growth across all segments and most product offerings.
- > RMB's focus on growing operational balances resulted in strong growth in average deposits, further aided by traction gained in the build-out of investment deposit offerings.
- > Aldermore benefited from growth in customer savings deposits through focused strategies to optimise deposit mix and respond to market and customer demand.

Institutional and other funding

- > Group Treasury institutional funding was largely flat, enabled by franchise deposit growth.
- > Asset-backed securities declined due to the continued run-down of various securitisation vehicles.
- > The increase in other funding was primarily due to increases in repo funding.

Updated through-the-cycle range

The group has updated its through-the-cycle range. The previous range of 100 to 110 bps was anchored to IAS 39 impairment principles and did not include Aldermore. Following the adoption of IFRS 9 the group conducted a detailed review per product and the new ranges are detailed in the table below:

South African and broader Africa operations	90 bps – 120 bps
UK operations	40 bps – 70 bps
Total group	80 bps – 110 bps

It is important to note that whilst the ranges have widened to cater for volatility introduced by IFRS 9, the mid-point is unchanged as the fundamental credit economics are not affected by accounting.

Changes in presentation of the credit information

The MotoNovo back book has significantly run down and now represents less than one per cent of total advances. As such the split of the back book and front book will no longer be presented. Where applicable, prior year amounts have been updated. The MotoNovo back book advances amounted to £139 million (December 2021: £474 million) or R2 840 million (December 2021: R10 185 million).

Covid-19 relief portfolio

The Covid-19 relief book is stable and performing in line with expectation. The total relief book has continued to decline and represents less than 0.1% of total group advances at 31 December 2022. As a result, separate disclosure of the Covid-19 relief book will no longer be provided and comparatives have been updated.

Other

Please refer to additional voluntary changes in presentation on page 187 in the IFRS section.

Temporary stress scenario

Given the event-driven uncertainty in the global and South African economy and the forecasting risks of economic assumptions in existing statistical models, an additional stress scenario was introduced during the financial year ended 30 June 2021. The scenario was initially introduced to capture the uncertainty around the impact of the Covid-19 pandemic and subsequently to address risks brought about by the impact of Russia's invasion of Ukraine and inflation and interest rate forecasting risks. Since June 2022, forecasting risks relating to inflation and interest rates have subsided and have to some extent been incorporated into the group's impairment models, with the expectation to be largely captured within the models by June 2023.

The absolute provisions and stage allocations at 30 June 2022 were retained. This was done to allow management time to assess and conclude that inflation and interest forecasting risks have been sufficiently incorporated into models. In addition, the unprecedented levels of loadshedding and the resultant impact on domestic growth and employment have introduced new forecasting risks not specifically catered for in impairment models. On balance, management has assessed that the absolute provisions raised at 30 June 2022 are sufficient to address these risks.

Management will continually reassess the need for this scenario as credit performance data emerges and risks are adequately embedded in-model, or through specifically quantified post-model adjustments, as required.

Credit continued**Overview of credit results****STAGE DISTRIBUTION OF ADVANCES**

The overall stage distribution of the book remained relatively stable, driven by advances growth and the low- and medium-risk origination strategy. Stage 2 advances increased as a result of the impact of rate hikes and inflation, although this took place off a low base and at a slower pace than expected despite the challenging macro environment. Stage 3 advances continued to decrease, albeit at a slower rate than previous periods.

The provisions for the temporary stress scenario for SA retail and commercial portfolios remained at the same level as June 2022.

Stage 1 advances

Stage 1 core lending advances increased period-on-period, given new business growth and, to a lesser extent, the curing of accounts. A further analysis is contained in note 1, pages 114 to 117.

Stage 2 advances

Stage 2 advances increased period-on-period and was driven by increases in both the stage 2 advances in current status and an increase in stage 2 arrears. This increase is impacted by rate hikes and inflation, with an increase in early arrears status. As expected, the UK operations account for most of the growth in arrears. A further analysis is contained in note 1, pages 114 to 117.

- > SA retail stage 2 advances increased period-on-period, largely attributable to an increase in stage 2 advances in current status, due to exposures triggering the significant increase in credit risk (SICR) indicators. The trend continued post June 2022, as early arrears in residential mortgages, WesBank VAF and personal loans increased. Retail customers are most affected by the higher interest rate cycle and cost-of-living pressures, which resulted in more customers entering the debt counselling process and additional accounts in arrears.
- > Retail unsecured stage 2 advances contracted period-on-period, as paying stage 2 advances, including Covid-19 relief advances, cure or settle. Since June 2022, stage 2 advances in card increased, driven by accounts in current status but triggering the SICR indicators. This increase is off a very low base, as a significant number of accounts cured in the comparative period. Personal loans stage 2 advances reduced marginally as the decrease in stage 2 advances in current status outstripped the increase in the arrears portfolio.
- > FNB commercial stage 2 advances decreased period-on-period, largely due to lower stage 2 advances in current status, driven by model enhancements and an improvement in economic outlook post the pandemic. Stage 2 arrears levels increased period-on-period and since June 2022, due to the migration of a few large exposures.
- > RMB CIB stage 2 advances increased marginally period-on-period given by strong book growth offset by the curing of a significant exposure.
- > Broader Africa stage 2 advances declined period-on-period reflecting the improved risk profile of the portfolio.
- > Period-on-period growth in stage 2 advances in the UK operations was driven by the MotoNovo book, partially offset by decreases in stage 2 advances in the Aldermore retail and commercial portfolios due to accounts curing. The MotoNovo stage 2 increase was due to the origination strain from advances growth and the deteriorating macros. It also continues to be impacted by the NOSIA remediation project. Since June 2022, all portfolios reflected increases in stage 2 driven by book growth, model refinements that result in more accounts migrating to stage 2 due to triggering SICR, and increases in arrears as a result of the deteriorating economic conditions in the UK.

STAGE DISTRIBUTION OF ADVANCES

Stage 3 advances

NPLs continued to decrease across most portfolios driven by good collections efforts, curing and slower inflows into NPLs. A further analysis is contained in note 3, pages 120 to 123.

- > SA retail NPLs contracted and NPLs as a percentage of advances declined period-on-period given book growth. Across all portfolios this reduction primarily resulted from the curing of paying NPLs due to focused collections strategies and slower inflows during the six months to June 2022. Some strain has emerged since June 2022 due to inflationary and interest rate pressure but credit experience remains better than expected given the macro environment.
- > Residential mortgage NPLs reduced period-on-period but increased marginally since June 2022, reflective of new business strain and rising interest rates.
- > Personal loans (excluding Covid-19 relief advances) and card NPLs contracted period-on-period driven by the curing of NPLs and slower inflows. NPLs in both portfolios remained flat since June 2022.
- > WesBank VAF NPLs decreased due to improved collections, slower inflows and a favourable curing performance.
- > FNB commercial NPLs declined as a percentage of advances, driven by settlements in the agricultural portfolio (-31%) and the property finance portfolio (-10%) and increased write-offs from historical NPL inflows.
- > The period-on-period increase in RMB CIB NPLs can be attributed to a limited number of counters with significant exposures migrating to stage 3 during the six months to June 2022. This was partly offset by a debt-to-equity restructure of a fully provided exposure in the private equity portfolio during the six months to December 2022. The restructured transaction was also the main driver of the decrease in NPLs since June 2022.
- > The broader Africa NPL ratio decreased and NPLs reduced period-on-period driven by a contraction in Botswana and Zambia resulting from write-offs, a slowdown in new inflows and strong recoveries. Namibia's NPLs were flat period-on-period.
- > In the UK operations, NPLs as a percentage of advances decreased period-on-period mainly due to curing and settlement of accounts in the retail and commercial portfolios supported by advances growth. This was offset by an increase in MotoNovo NPLs period-on-period. Since June 2022 there has been an uptick in the UK operations' NPLs across all portfolios due to deteriorating economic conditions. The MotoNovo NPLs continued to be impacted by the NOSIA remediation project, offset somewhat by lower NPL inflows despite the higher interest and inflation environment as the bulk of the portfolio is being written at fixed rates.

Credit continued

COVERAGE

Performing coverage

Performing coverage decreased given lower stage 2 coverage. This was driven by mix change, given the higher growth in RMB and FNB commercial advances, which attract lower coverage to retail advances. Most underlying portfolios have largely maintained coverage, other than the UK operations, where performing coverage increased. A further analysis is contained in note 2, pages 118 and 119.

- > The SA retail performing coverage reduced period-on-period. Overall impairment provision levels reflect a balance of encouraging underlying performance with uncertainties associated with the operating environment, most notably interest and inflation pressure. Performing coverage reduced period-on-period as underlying performance proved better than expected. Since June 2022 performing coverage reduced marginally, with lower stage 1 cover in part due to strong new business growth in secured, and stage 2 cover increasing in line with a relative increase in arrears. The inflows into stage 2 represent accounts with lower coverages, such as exposures under debt counselling, and on balance contribute to a reduction in the stage 2 cover period-on-period however, increasing for the six months since June 2022.
- > FNB commercial performing coverage reduced period-on-period mostly driven by the release of provisions during the six months ended June 2022 due to a general improvement in the economic outlook post Covid-19.
- > RMB CIB core performing coverage (excluding HQLA) declined, impacted by strong book growth from better-rated counterparties, with lower coverage, coupled with the release of impairments due to an easing of risk in the sectors that were previously impacted by the pandemic (real estate investment trusts, leisure, casinos, and hotels) and the curing of a significant exposure to stage 1. A limited number of counters with higher provisions migrating to NPL status, resulted in lower coverage.
- > Broader Africa performing coverage reduced period-on-period, driven by book growth and a decrease in stage 2 advances, reflecting the improved risk profile in the portfolio. Performing coverage has remained stable since June 2022.
- > Performing coverage in the UK operations increased across all portfolios driven by model refinements, higher arrears and the deteriorating macro-economic outlook.

Stage 3 coverage

Stage 3 coverage increased from December 2021 and improved somewhat from June 2022 levels. A further analysis is contained in note 3, pages 120 to 123.

- > SA retail stage 3 impairment coverage increased marginally since December 2021 and June 2022, reflecting cautious payment and recovery expectations.
- > Residential mortgages stage 3 cover decreased period-on-period as the average age of NPLs improved, with older accounts being worked out while new inflows attract a lower cover due to a higher probability to cure. Cover remained flat since June 2022.
- > NPL coverage in the personal loans portfolio increased marginally due to a change in the mix of the portfolio, with operational NPLs representing a higher percentage of the book.
- > WesBank VAF stage 3 impairment coverage increased due to a slowdown in inflows into stage 3 and substantial write-offs in recent months, with remaining stage 3 advances representing older NPLs with higher coverage.
- > RMB SA CIB stage 3 coverage decreased from December 2021 and June 2022 levels despite the migration of certain counters. The decrease was off the back of the restructure of a significant exposure in the private equity portfolio during the six months ended 31 December 2022, which attracted a higher coverage. Refer to page 95 for more detailed information. In the lending portfolio, stage 3 advances increased period-on-period and since June 2022. The stage 3 cover in the lending book increased period-on-period driven by the migration of a highly covered exposure into stage 3. After June 2022, the NPL coverage decreased marginally as a result of new inflows into stage 3.
- > Despite the overall decrease in NPLs, the stage 3 coverage in broader Africa increased due to a mix change away from secured to unsecured stage 3 accounts, which attract higher coverage. Increased average time of exposures in the stage 3 portfolio also contributed to the increase.
- > The UK operations stage 3 coverage increased period-on-period and since June 2022. In both periods this increase was primarily driven by MotoNovo given advances growth, and the ageing stage 3 portfolio due to the impact of the remediation on MotoNovo's collections and write-off processes. In the Aldermore retail portfolio, the stage 3 coverage declined in both periods due to model refinements.

IMPAIRMENT CHARGE

The increase in the group credit loss ratio is largely attributable to the following, with a further analysis contained in note 4, pages 124 and 125:

- > an increase in overall stage 1 provisions, which was expected given advances growth and a marginal uptick in the coverage ratio since June 2022;
- > an increase in stage 2 provisions, reflecting book growth and origination strain. This was partly offset by a decrease in the coverage ratio as the mix of the book changed;
- > net write-offs and the post write-off recoveries remained similar to the prior period; and
- > the overall charge benefited from a decrease in NPLs.

The main impairment charge drivers are:

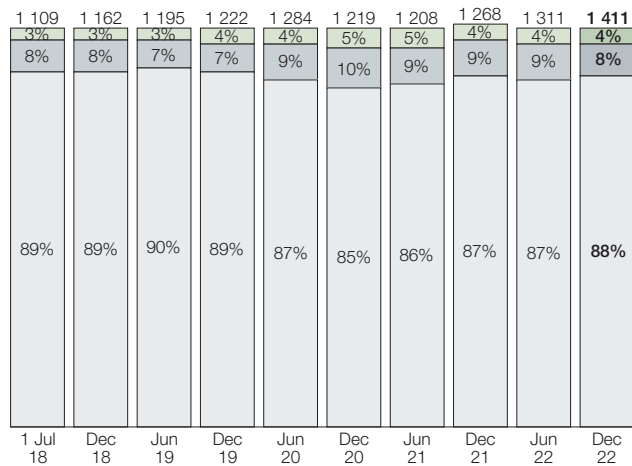

- > The SA retail CLR reduced marginally period-on-period mainly as a result of a net contraction in stage 3 advances due to higher cure rates and lower inflow levels into stage 3, despite the uptick in stage 2 arrears in the secured portfolio in line with expectations. The secured portfolios CLR reduced period-on-period. The unsecured portfolios CLR had a small increase period-on-period driven by book growth, compared to a net contraction in advances in the 6 months to December 2021.
- > The WesBank VAF CLR reduced reflecting the improvement in arrears, as the risk profile of the book and collections improved. This was further supported by write-offs and cure.
- > The FNB commercial CLR increased, although it is still lower than the TTC range and off a low base. Balance sheet provisions were retained as uncertainty in the operating environment relating to loadshedding, adverse weather, fuel prices, interest rate outlook, inflation impact and logistical challenges remains.
- > The core lending CLR for RMB CIB (excluding HQLA) decreased from a charge in December 2021 to a net release, despite strong advances growth. Excluding the restructure transaction explained below, the CLR would have been 0.06% (R96 million). This reflects the origination strategy of focusing on highly rated counters (with lower coverages) and the improved credit risk profile of the overall portfolio (particularly the industries previously impacted by the pandemic).
- > The CLR for broader Africa increased slightly period-on-period with better performance across most of the subsidiaries offset by an additional provision taken in Ghana as a result of the domestic debt exchange and the macro environment.
- > The CLR for the UK operations increased period-on-period driven by advances growth across the portfolios and the downward shift in the economic outlook amidst the cost-of-living crisis, resulting in the underlying portfolio deterioration and increased coverage. The ageing of the MotoNovo NPL book and the impact of the remediation process further contributed to the overall increase.
- > During the reporting period, a private equity investee company implemented a debt-to-equity restructure. As a result, a portion of the investee's loan was converted to equity while the other was settled according to the contractual terms of the loan. Due to the IFRS requirements, a gain of R715 million was recognised in investment income relating to the portion of the loan that was converted to equity, refer note 4 page 134. The portion of the advance settled resulted in R105 million impairment release with the majority of the loan being written off (R716 million). The impairment of the equity portion resulting from the restructure was recognised in share of profits from associates and joint ventures (R820 million). Refer to pages 135 and 136. The net earnings impact of this transaction is zero.

[#] December 2021 has been adjusted for core lending advances, which exclude assets under agreements to resell.

Income statement components

The table on the next page analyses the income statement charge based on total balance sheet provision movements and amounts that are recognised directly in the income statement. Below are the definitions of the income statement components.

Income statement component	Definition
Volume change in stage 1	Determined by using the same stage 1 coverage as in the prior period applied to the movement between prior and current period stage 1 advances.
Change in stage 1 coverage	Calculated as the difference in coverage period-on-period multiplied by the comparative period stage 1 advances.
Volume change in stage 2	Determined by using the stage 2 coverage in the prior period applied to the movement between prior and current year stage 2 advances.
Change in stage 2 coverage	Calculated as the difference in coverage period-on-period multiplied by the comparative period stage 2 advances.
Change in stage 3 provisions	Difference between current and prior year NPLs. Includes the movements in interest suspended on stage 3 advances.
Gross write-offs and other	Gross advances written off and foreign exchange movements, acquisition and disposal of advances and transfers to non-current assets held for sale.

Lending to energy and fossil fuel sectors

The table below unpacks RMB's net advances by energy sector. The current balance sheet mix continues to reflect the respective energy development needs of the core markets where the group operates, particularly South Africa, Nigeria and Mozambique. In addition, there was an increase in the exposure to global commodity traders, a trend driven by elevated commodity prices.

The group has placed limits on the financing of new coal-fired power stations and new coal mines. These limits have been updated and are available on FirstRand's website in the group's policy on energy and fossil fuels financing. Other fossil fuels, such as oil and gas, are subject to internal prudential limits that consider transition risk as well as other sector-specific risk characteristics.

South Africa has had a historically high dependence on thermal coal for its energy needs. Lending to thermal coal mines and electricity utilities has been the underlying driver of advances in the past and continues to be the case. Nigeria's energy mix is still dominated by oil, which is key to the country's economic growth, and the majority of the upstream oil advances shown below reflects this. Mozambique is in the process of addressing its energy needs through an extensive offshore gas programme and RMB's participation in this programme is reflected below in the growth in gas assets.

Renewable energy remains a focus for the group, and RMB is actively looking for opportunities in this space, both in South Africa and other African markets. A more comprehensive view of the group's exposure to sectors that are impacted by high and elevated levels of climate transition risk is provided annually in FirstRand's Task Force on Climate-related Financial Disclosures (TCFD) disclosures, which are available on the group's website.

Sector R million	December 2022		December 2021		June 2022
	Drawn exposure	% of total group loans	Drawn exposure	% of total group loans	Drawn exposure
Upstream oil and gas*	5 574	0.4	3 211	0.2	2 902
Down- and midstream oil and gas**	13 955	0.9	10 066	0.7	14 729
Thermal coal mines ^{†,††}	1 679	0.1	2 061	0.2	1 527
Fossil fuels excluding natural gas	21 208	1.4	15 338	1.1	19 158
Natural gas	1 814	0.1	1 312	0.1	1 557
Total fossil fuels	23 022	1.5	16 650	1.2	20 715
Solar	10 872	0.7	10 331	0.8	10 791
Wind	4 077	0.3	4 612	0.3	4 199
Hydro	152	–	158	–	157
Other renewable energy	878	0.1	212	–	932
Total renewable energy	15 979	1.1	15 313	1.1	16 079
Electricity utilities[‡]	8 219	0.5	7 868	0.6	8 755

* The period-on-period increase was driven by drawdowns from two large clients. The portfolio remains within its limit as disclosed in FirstRand's policy on energy and fossil fuels financing.

** The period-on-period increase was driven by drawdowns from three large clients. Drawdown was largely the result of working capital utilisation.

† The period-on-period decrease was driven by a settlement from one large client.

†† Defined as companies where the consolidated revenue derived from thermal coal mining exceeds 30% of total revenue.

‡ FirstRand's limit on coal financing, as disclosed in FirstRand's policy on energy and fossil fuels financing, encompasses loans and advances to coal mining and to coal-fired power generation. The combined exposures to these activities remains within the limit.

Net fee and commission income	18 310	16 571	10	33 396

* The description has been updated to more appropriately reflect the nature of income earned. This line was previously titled "Electronic transaction fees". The amount reported in the prior period has not changed.

** Other bank charges include annual and monthly administrative fees, fees for customer transaction processing (e.g. SASwitch fees), cash withdrawal fees, debit order charges, internet banking fees and utilisation of other banking services.

KEY DRIVERS

- > FNB NIR grew 13%, reflecting 15% higher transaction volumes and 5% growth in the active customer base and despite annual sub-inflation account fee increases with fee givebacks of R213 million.
- > Electronic platform logins grew 9% in total across all interfaces, whilst manual volumes increased 4%. Branch and cash centre transaction volumes decreased 12% and 6%, respectively.
- > Card swipe volumes increased 17% reflecting strong customer activity levels, which contributed to the 20% overall growth in card commissions.
- > RMB's knowledge-based fee income was supported by increased deal flow, providing an uplift to both structuring and commitment fee income, coupled with strong advisory income. In broader Africa income was resilient despite the tough operating environment and was underpinned by client acquisition strategies.
- > The reduction in management and fiduciary fee income is largely due the decline in FNB WIM AUM, as well as outflows from the legacy Ashburton Jersey business. This was despite good growth in Ashburton's domestic AUM (+11%).
- > Overall group fee and commission income growth was softened by higher levels of expenses relating to transactional activity, and the cost of customer rewards. This increase is due to higher commissionable turnover as customer spending normalises, an increase in card network association fees and currency impacts.

Non-interest revenue continued

NOTE 2 – INSURANCE INCOME – UP 31%

R million	Six months ended 31 December		% change	Year ended 30 June
	2022	2021		2022
Insurance risk-related income	1 725	1 089	58	2 797
– Insurance premiums received*	3 133	2 620	20	5 416
– Reinsurance expenses	(469)	(366)	28	(642)
– Insurance benefits and claims paid	(1 299)	(1 417)	(8)	(2 596)
– Reinsurance recoveries	246	247	–	484
– Transfers from/(to) policyholder liabilities (gross)	67	(193)	(>100)	(136)
– Transfer from policyholder liabilities (reinsurance)	47	198	(76)	271
Commissions, brokerage and cell captives	734	791	(7)	1 500
Total insurance income	2 459	1 880	31	4 297

* These amounts are net of intergroup eliminations of R45 million (December 2021: Rnil; June 2022: R4 million).

KEY DRIVERS

- > Insurance risk related income increased 58% mainly driven by an increase in gross premiums and an improved claims experience as the impacts of Covid-19 dissipated. Premium income grew 20% driven by sales of funeral, short-term and credit life. The short-term business continues to exceed expectations, with new business APE more than doubling over the period on the back of sales of a retail comprehensive suite of products. Life and short-term new business APE increased 42%, resulting in 22% growth in the in-force book.
- > Commissions, brokerage, and cell captive income is derived from all other insurance businesses and arrangements entered into by WesBank, MotoVantage, FNB and the broader Africa subsidiaries. Cell-captive income decreased as a result of the run-off profile in certain books as the group builds out its own products. Furthermore, partly offset by growth in the broader Africa driven by strong performance in Namibia and Botswana.

NOTE 3 – TRADING AND OTHER FAIR VALUE INCOME – UP 5%

<i>R million</i>	Six months ended 31 December		% change	Year ended 30 June
	2022	2021		2022
Trading income	2 499	2 349	6	5 153
– Equities	(86)	90	(>100)	81
– Commodities	157	283	(45)	663
– Fixed income	1 166	895	30	2 212
– Currencies	1 262	1 081	17	2 197
Other fair value income	157	172	(9)	450
– RMB banking activities and other	68	196	(65)	386
– UK operations fair value hedge	138	(22)	(>100)	155
– Group Treasury economic hedges and other	(49)	(2)	>100	(91)
Total trading and other fair value income	2 656	2 521	5	5 603

KEY DRIVERS

- > Trading income reflects the following:
 - Equities experienced some normalisation from the record highs in the previous period which resulted from increased client flows on the back of significant corporate actions and overall higher market activity. In the current period equities reflected a net loss.
 - The commodities performance also reflects the base effect of an outperformance in the prior period, on the back of elevated client hedging and trading activities.
 - Strong fixed income growth was driven by client flows arising from rate movements, further supported by credit trading following the stabilisation of markets. Broader Africa revenue improved reflecting market making activities and secured financing activities.
 - Currencies performance was supported by structured fee income with strong domestic and broader Africa foreign exchange client execution.
- > RMB banking activities includes various one-off items, albeit at lower levels than that in the prior period.
- > The UK operations' fair value interest rate hedge portfolio reported a gain of £6.7 million in the current period, reflective of the significant macroeconomic volatility and rising interest yield curves, most notably in September following the mini-budget speech. The political landscape and rates have stabilised.
- > Group Treasury fair value income declined, driven by the net open foreign exchange position. In the current period there was a translation loss compared to a gain in the prior period. The current period loss is largely due to the 7% depreciation of the rand against the US dollar from October 2022 to December 2022.

Non-interest revenue continued

NOTE 4 – INVESTMENT INCOME – UP >100%

R million	Six months ended 31 December		% change	Year ended 30 June
	2022	2021		2022
Private equity realisations and dividends received	1 916	5	>100	34
– Profit on realisation of private equity investments	1 190	1	>100	1
– Debt-to-equity swap* (restructure with zero earnings impact)	715	–	–	–
– Dividends received	9	2	>100	29
– Other private equity income	2	2	–	4
Other investment income	(384)	277	(>100)	445
– (Loss)/profit on assets held against employee liabilities	(1)	144	(>100)	102
– Ghana sovereign debt restructure	(496)	–	–	–
– Other investment income	113	133	(15)	343
Total investment income	1 532	282	>100	479

* Refer to note on share of profit from associates and joint ventures where this is reflected as a loss.

KEY DRIVERS

- > The profit on realisation of private equity investments reflects a significant realisation during the period.
- > The debt-to-equity restructure of a private equity counter resulted in a gain on the conversion of the debt (R715 million) and a release of the credit impairment provision (R105 million), with a corresponding loss in the share of associate income (R820 million). Refer to page 95 for a detailed explanation of the transaction.
- > New private equity investments totalled c. R850 million for the period (December 2021: R500 million). The unrealised value in the portfolio was c. R5.2 billion at December 2022 (December 2021: R4.8 billion) reflective of the improving underlying performance. The unrealised reserves grew 7% since June 2022 if adjusted for the realisation.
- > The performance of the group's post-retirement employee liability asset portfolio declined, largely due the inclusion in the prior period of market value increases in inflation-linked bonds as the environment stabilised, with the current period impacted by muted market movements since June 2022.
- > An impairment provision representing 57% of the face value was raised which reflect the economic loss of the proposed Ghana government bond restructure. The group's accounting policy is to reflect impairments of investment securities in investment income because investment securities, including government bonds, are viewed as investment activities and not lending activities. The credit loss ratio and impairment charge therefore reflect the credit performance from core lending activities.

NOTE 5 – OTHER NON-INTEREST REVENUE – UP 15%

KEY DRIVERS

- > Rental income represents 47% (December 2021: 55%) of other NIR.
- > Improved other NIR performance was driven by WesBank's NIR which benefited from higher early termination fees given larger settlements taking place, as well as non-rental income from leasing transactions, including maintenance and repairs arising from ageing fleets. Growth in other NIR was further supported by other revenue streams, such as MVNO related income.

Shares of profit from associates and joint ventures – down >100%

Investments in associates and joint ventures

* Refer to note 4 on investment income where the benefit is recognised and a portion of this loss is accounted for as a release of credit impairments.

Non-interest revenue continued**KEY DRIVERS**

- > The private equity related annuity share of profit from associates and joint ventures increased following the post-pandemic recovery, despite the realisation.
- > The debt-to-equity restructure of a private equity counter resulted in a loss reflected under private equity associate income (R820 million) with a corresponding increase in investment income and net release of impairment provisions. The net impact of the transaction is neutral on earnings. Refer to page 95 for a more detailed explanation. Further impairments on investee companies was raised in the current period resulting in an effective decrease in income.
- > TFS's underlying performance was driven by growth in the advances book. Given the growth in advances, the level of provisioning increased in the current period against a release of provisions in the prior period.
- > The operational performance of VWFS improved resulting in growth in the advances book, however, the prior period included the release of provisions that were raised through Covid-19. Given book growth, the current period required raising provisions.
- > RMB Morgan Stanley's performance was impacted by a decline in exchange volumes coupled with margin compression and lower client activity and the prior period included higher revenue from corporate actions.
- > The loss reported in other operational associates is due to increased impairments on investments in other RMB portfolios that were similarly negatively impacted by the current macro-economic environment.

Total income from private equity activities (private equity division and other private equity related activities)

RMB earns private equity related income primarily from its private equity business, however, other areas in RMB also engage in or hold private equity related investments (as defined in *Circular 01/2021 – Headline Earnings*), which are not reported as part of RMB private equity's results.

The underlying nature of the various private equity related income streams are reflected below.

PRIVATE EQUITY RELATED INCOME

Total IT spend	7 699	6 722	15	14 088

* Comparative numbers have been amended to reflect the continued refinement and alignment of the methodology applied by the UK operations to the rest of the group.

KEY DRIVERS

- > Staff costs represent 63% (December 2021: 60%) of the group's operating expenses.

	% change	Reasons
Direct staff costs	13	The increase in staff costs is driven by: <ul style="list-style-type: none"> > annual salary increases which averaged above 6% (unionised staff at 6.5%); > headcount increase of 6% from December 2021 and June 2022, excluding FirstJob employees; and > repricing of certain technical skills.
Variable staff expenditures		
Short-term incentive payments	9	The estimated growth in the short-term incentive payments is aligned to performance.
Share-price related incentive payments	24	The 2019 long-term incentive (LTI) did not vest, however this release was offset by the Covid-19 retention scheme, new schemes concluded at higher grant prices and various revaluations. This creates a distortion in the period-on-period growth, combined with the inclusion of the bonus deferral which is linked to the FirstRand share price.
Other staff related costs	35	Due to an increase in temporary and contract staff, to provide additional capacity for projects and strategic initiatives.

- > The marginal decline in depreciation reflects the commensurate decrease in the size of the FML fleet.
- > Advertising and marketing costs increased due to the FNB brand refresh and given higher levels of economic activity, the reinstatement of previously suspended campaigns and sports sponsorships.
- > Professional fees increased mainly due to additional resourcing required for the execution of platform-related projects.
- > Computer expenses grew because of higher software and licensing costs from increased headcount as well as annual renewals. Costs were further negatively impacted by a weaker currency.
- > Business travel has returned to pre-pandemic levels, with associated costs structurally higher, including currency impacts.
- > Other expenditure includes various items such as other provisions, entertainment, bank charges, insurance-related acquisition costs, subscriptions and membership fees.

financial resource management

Economic view of the balance sheet

One of the group’s key financial resource management objectives is to protect and enhance FirstRand’s financial performance through the holistic management of the balance sheet and its income streams within the context of the macro environment. This includes the relative positioning of the balance sheet through strategic tilts related to long-term trends, and tactical tilts associated with the current point in the cycle.

The structure of the balance sheet reflects the group’s long-term strategy to increase resilience, diversify credit exposures across sectors and segments, increase asset marketability, and optimise use of institutional funding.

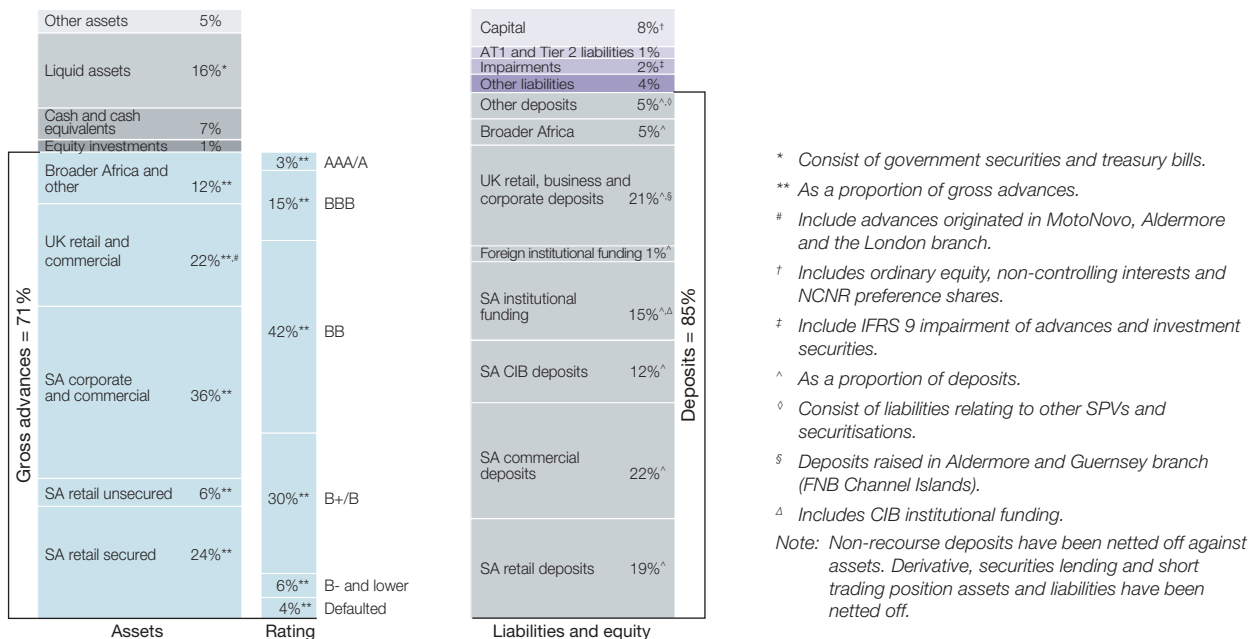

When assessing the underlying risk in the balance sheet, the group’s asset profile reflects a diversified advances portfolio, which constitutes 71% of total assets. The composition of the gross advances portfolio consists of SA retail secured (24%), SA retail unsecured (6%), SA corporate and commercial (36%), UK retail and commercial (22%), and broader Africa and other (12%). At December 2022, the group reported total NPLs of R50 709 million (3.59% of core lending advances) and a credit loss ratio of average core lending advances of 74 bps.

Cash and cash equivalents, and liquid assets represent 7% and 16%, respectively, of total assets. The group’s equity investments primarily relate to RMB’s private equity activities.

FirstRand has continued to successfully enhance its risk-adjusted funding profile through optimised use of Group Treasury funding and growing its deposit franchise. The weighted average remaining term of domestic institutional funding was 33 months at December 2022 (December 2021: 37 months – restated on refinement of the calculation). The reduction resulted from lower long-dated issuance volumes for the period (senior, Tier 2 and AT1) compared to a marginal increase in shorter-tenor money market funding. The contribution of institutional funding to the funding stack has moderated further.

The group remained strongly capitalised with a CET1 ratio of 13.2%, a Tier 1 ratio of 13.9% and a total capital adequacy ratio of 16.0%. Gearing increased to 12.5 times (December 2021: 12.3 times), driven by 5% growth in average total equity and 8% growth in average total assets for the period.

Economic view of the balance sheet

Funding and liquidity

Funding and liquidity management approach

A comprehensive overview of the group’s funding and liquidity management approach is provided in the Basel Pillar 3 disclosure for the year ended 30 June 2022, which is available at www.firstrand.co.za/investors/basel-pillar-3-disclosure/.

Funding conditions

The group continued to contend with a weak global and local macroeconomic environment as central banks continued to tighten monetary policy to address inflation pressures which has contributed to elevated global recession risks. Despite the macroeconomic headwinds, there has been limited impact on funding access and liquidity availability for the group in both rand and hard currency.

The spread to JIBAR paid on 12-month money market instruments is most representative of bank funding costs in the money markets. During the period under review institutional funding spreads tracked marginally lower. This was in response to the additional liquidity injected into the market following the final implementation of the revised monetary policy implementation framework. The period under review was also marked by renewed economic activity and credit demand that contributed to funding demand. Through its customer franchises, the group continued to grow customer deposits, enabling it to more selectively incorporate institutional funding, with money market and debt issuances, where required.

12-month mid-market funding spread

Funding and liquidity continued

Funding measurement and activity

The following graph provides a segmental analysis of the group's funding base.

Funding portfolio growth

R billion

Note 1: Percentage change is based on actual underlying numbers rather than the rounded figures shown in the bar graphs above.

Note 2: Asset-backed securities include Aldermore's securitisation transactions.

* Includes South Africa and the London branch.

** Broader Africa deposits include CIB deposits related to the broader Africa subsidiaries.

The Aldermore savings deposit franchise increased 16% to £15 billion (in local currency).

† Group Treasury deposits include the SARB funding facility related to the South African Covid-19 government-guaranteed loan scheme and the government's Bounce-Back Scheme.

‡ Aldermore's utilisation of the BoE term funding scheme decreased 5% to £1.2 billion (in local currency).

The group's funding mix has improved, with further growth in deposits relative to institutional funding sources period-on-period.

Funding mix

Funding by instrument type

Funding and liquidity continued

The group's focus on growing main-banked transactional accounts naturally results in a significant proportion of contractually short-dated funding. Although these deposits fluctuate depending on each customer's individual transactional and savings requirements, viewed in aggregate the overall funding portfolio is more stable, resulting in an improved overall liquidity risk profile.

Bank funding analysis by source*

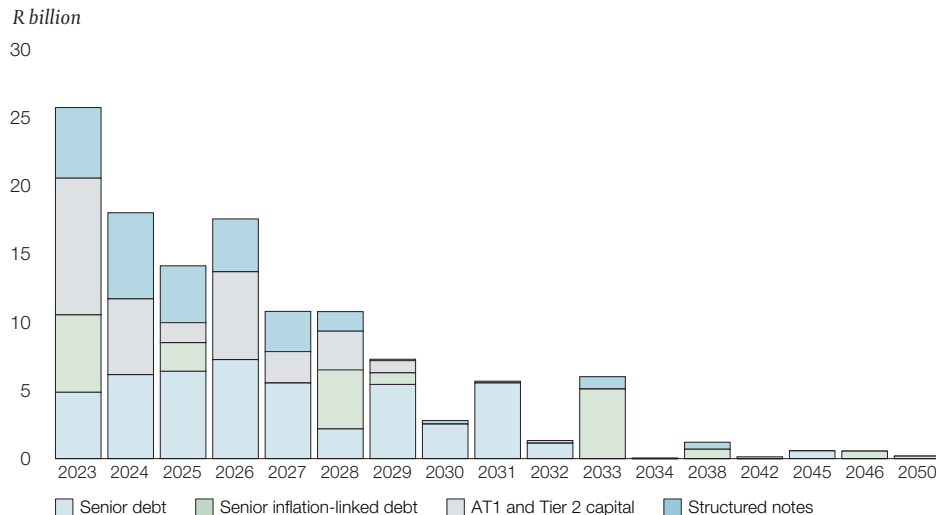

Funding liabilities by instrument type and term

The maturity profile of the bank’s capital market instruments is depicted in the following chart. The bank does not have significant instrument-specific concentration risk in any one year and seeks to issue across benchmark tenors, taking pricing and investor demand into consideration. Finalisation of regulations regarding flac and financial conglomerates will influence future issuance considerations.

Maturity profile of the bank’s* capital market instruments

* Including foreign branches.

Funding and liquidity continued

Foreign currency balance sheet

The active management of foreign currency liquidity risk remains a focus given the group's operations in the UK and in broader Africa.

Aldermore

Aldermore has a diversified and flexible funding strategy and is predominantly funded by deposits from retail and business clients. These account for approximately 87% of total funding, with the savings deposit franchise totalling over £15 billion at December 2022.

Aldermore's liquid asset composition remains prudent with an LCR well in excess of the regulatory minimum, and a liquidity risk position managed to stringent internal parameters. Aldermore has maintained a diverse portfolio of HQLA, which has been managed within risk appetite throughout the period.

MotoNovo

MotoNovo is supported by Aldermore's funding resources, with new business funded via a combination of on-balance sheet deposits and institutional and structured funding, including market securitisations and warehouses.

MotoNovo's back book (originated prior to May 2019) forms part of the bank's London branch and remains funded through existing funding mechanisms. This book continues to run down and amounted to £139 million at December 2022.

Liquidity risk position

The following table summarises the group's available sources of liquidity.

COMPOSITION OF LIQUID ASSETS

<i>R billion</i>	As at 31 December	
	2022	2021
Cash and deposits with central banks	77	56
Short-term liquidity instruments	110	114
Long-term investment securities	173	130
Other liquid assets	32	42
Total liquid assets	392	342

Liquidity ratios for the group and bank at December 2022 are summarised below.

LIQUIDITY RATIOS

%	Group*		Bank*	
	LCR**	NSFR	LCR**	NSFR
Regulatory minimum	100	100	100	100
Actual	121	120	124	117

* The group's LCR and NSFR include the bank's operations in South Africa, and all registered banks and foreign branches in the group. The bank's LCR and NSFR reflect South African operations only.

** The LCR is calculated as a simple average of 92 days of daily observations over the period ended 31 December 2022 for FirstRand Bank South Africa and the London branch. The remaining banking entities, including Aldermore, and the India and Guernsey branches, are based on the month-end or quarter-end values. The figures are based on the regulatory submissions to the PA.

The graphs below provide a historical view of the prudential liquidity ratios for both the group and the bank.

LCR

NSFR

Capital

Capital management approach

A comprehensive overview of the group's capital management approach is provided in the Basel Pillar 3 disclosure for the year ended 30 June 2022, which is available at www.firstrand.co.za/investors/basel-pillar-3-disclosure/.

Period under review

During the period under review the group maintained strong capital and leverage ratios in excess of regulatory minimums and internal targets.

CAPITAL ADEQUACY AND LEVERAGE RATIOS AS AT 31 DECEMBER

%	Capital			Leverage
	CET1	Tier 1	Total	Total
Regulatory minimum*	8.75	11.0	13.25	4.0
Internal target**	11.0 – 12.0	>12.0	>14.5	>5.5
Actual (including unappropriated profits)#				
2022	13.2	13.9	16.0	7.7
2021	13.6	14.3	16.5	7.9

* Including the group's domestic systemically important bank (D-SIB) requirement of 1.5% and CCyB requirement of 0.25%. The individual capital requirement (Pillar 2B) is confidential and therefore excluded.

** Group total capital adequacy target revised to >14.5% given the CCyB for UK businesses. Bank total capital adequacy target remains at >14.25%.

Refer to the Basel Pillar 3 standardised disclosures at www.firstrand.co.za/investors/basel-pillar-3-disclosure/ for ratios excluding unappropriated profits.

The PA removed all temporary capital relief measures issued during the pandemic and restored the Pillar 2A requirement of 1% on 1 January 2022. The BoE reinstated the UK CCyB add-on of 1% in December 2022. This increased the overall minimum capital requirements for FirstRand given the reciprocity agreement in place with the PA in South Africa. Consequently, the group's total capital adequacy target was lifted by 25 bps to cater for the CCyB change, whilst the bank's capital targets remain unchanged.

There is ongoing focus on optimising the overall level and mix of capital across the group and its regulated subsidiaries. The bank issued a combination of AT1 and Tier 2 instruments to ensure sustainable support for ongoing growth initiatives and redemption of existing capital instruments.

The group continues to enhance the use of economic capital in risk-based decision-making, including capital allocation. The assessment of economic risk aligns with FirstRand's economic capital framework to ensure the group remains solvent at a confidence interval of 99.93%, and that it can deliver on its commitments to stakeholders over a one-year horizon. Regular reviews of the economic capital position are carried out across the group, enabling efficient portfolio optimisation with respect to financial resource management and portfolio behaviour. For the period under review, the group continued to meet its economic capital requirements and reported an economic capital multiple (loss-absorbing capital/economic capital requirement) of 1.6 times on a post-diversified basis.

The graphs below provide a five-year view of the group’s capital adequacy, RWA and leverage positions.

The increase in the group’s risk density reflects changes in the balance sheet mix.

Capital adequacy*

RWA history

* Including unappropriated profits.

Leverage*

* Including unappropriated profits.

The Basel III leverage ratio is a supplementary risk-based capital measure and is a function of Tier 1 capital, and total on- and off-balance sheet exposures. The decrease in the leverage ratio to December 2022 mainly relates to an increase in total exposures, partly offset by an increase in Tier 1 capital.

Capital continued

Supply of capital

COMPOSITION OF CAPITAL*

Performance measurement

The group aims to deliver sustainable returns to its shareholders. Each business unit is evaluated on shareholder value created. The group's specific performance measures are economic profit (NIACC) and returns (ROE).

Targeted hurdle rates are set for the business units and capital is allocated to each business unit based on its risk profile. The capital allocation process is based on internal assessment of the capital requirements.

NIACC has increased due to the growth in normalised earnings of 15%. Average shareholders' equity increased 5%, after the payment of the special dividend. The group's ROE improved from 20.1% to 21.8%, above the group's cost of equity (COE) of 14.25%.

NIACC AND ROE

R million	Six months ended 31 December		% change	Year ended 30 June
	2022	2021		2022
Normalised earnings attributable to ordinary shareholders	18 047	15 742	15	32 663
Capital charge*	(11 800)	(11 185)	5	(22 551)
NIACC**	6 247	4 557	37	10 112
Average ordinary shareholders' equity and reserves	165 608	156 981	5	158 252
ROE (%)	21.8	20.1		20.6
Cost of equity (%)#	14.25	14.25		14.25
Return on average RWA	3.07	2.90		2.98

* Capital charge based on cost of equity.

** NIACC = normalised earnings less capital charge (cost of equity x average ordinary shareholders' equity and reserves).

The group's cost of equity is calculated using the capital asset pricing model. The risk-free rate of 9.3% (2021: 9.3%) is determined through a fair value assessment of the South African risk-free rate with the calculations referencing the global risk-free yield and the country risk premium as well as expected inflation adjusted for potential future inflation uncertainty. The risk premium of 4.95% (2021: 4.95%) is determined using the FirstRand beta and equity risk premium.

NIACC and cost of equity

Performance measurement continued

Shareholder value creation

The decomposition of the ROE in the table below indicates that the improvement in ROE was largely driven by an improvement in return on assets (ROA).

SHAREHOLDER VALUE CREATION

	Six months ended 31 December					Year ended 30 June
	2022	2021	2020	2019	2018	2022
ROA (%)	1.74	1.64	1.16	1.66	1.71	1.69
Gearing*	12.5	12.3	13.5	12.8	13.0	12.2
ROE (%)	21.8	20.1	15.6	21.2	22.3	20.6

* Gearing = average total assets/average equity.

The following graph provides a summary of the drivers of the ROA over time. The increase in ROA from 1.64% at 31 December 2021 to 1.74% at 31 December 2022 was primarily driven by the increase in revenue for the period. Average total assets increased 8%.

ROA analysis

Note: The graph shows each item before tax and non-controlling interests as a percentage of average assets. ROA is calculated as normalised earnings (after tax and non-controlling interests) as a percentage of average assets.

Operating business performance

The tables below provide a summary of performance of the group's operating businesses.

IFRS information

Presentation

Basis of presentation

The condensed consolidated interim financial statements contained in this *Analysis of financial results* booklet are prepared in accordance with the JSE Limited Listings Requirements for interim reports and the requirements of the Companies Act of South Africa as applicable to summary financial statements.

The JSE Listings Requirements require interim reports to be prepared in accordance with and to contain the information required by:

- > International Financial Reporting Standard, IAS 34;
- > SAICA Financial Reporting Guides as issued by the Accounting Practices Committee; and
- > Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council.

The condensed consolidated interim financial statements for the six months ended 31 December 2022 have not been audited or independently reviewed by the group's external auditors.

Any forecast financial information contained herein has not been reviewed or reported on by the group's external auditors.

Accounting policies

The accounting policies and other methods of computation applied in the preparation of the condensed consolidated interim financial statements are in terms of IFRS and are consistent with those applied for the year ended 30 June 2022.

The condensed consolidated interim financial report is prepared in accordance with the going concern principle under the historical cost basis as modified by fair value accounting or certain assets and liabilities where required or permitted by IFRS.

Improvements to the Conceptual Framework, as well as amendments to IAS 16, IAS 37 and IFRS 9 became effective in the current period. None of these amendments to IFRS impacted the group's reported earnings, financial position or reserves, or the accounting policies.

Normalised results

The group believes normalised earnings more accurately reflect operational performance. Consequently, headline earnings have been adjusted to take into account non-operational and accounting anomalies, which, in terms of the JSE Listings Requirements, constitute *pro forma* financial information.

All normalised entries, as included and described in the *Analysis of financial results* for the year ended 30 June 2022, remain unchanged in nature.

This *pro forma* financial information, which is the responsibility of the group's directors, has been prepared for illustrative purposes to more accurately reflect operational performance. Due to its nature it may not fairly present, in terms of IFRS, the group's financial position, changes in equity and results of operations or cash flows.

Description of difference between normalised and IFRS results

Consolidated private equity subsidiaries

In accordance with IFRS, operating costs of consolidated private equity subsidiaries are included in profit or loss as part of operating expenses. When calculating normalised results, these operating costs are reclassified to NIR, where income earned from these entities is included. This presentation of net income earned from consolidated private equity subsidiaries more accurately reflects the underlying economic substance of the group's relationship with these entities.

FirstRand shares held for client trading activities

The group invests in FirstRand shares to offset its exposure as a result of client trading positions. Depending on the nature of the client trading position and resulting risks, FirstRand shares may be held long or sold short by the group.

In terms of IAS 32, FirstRand shares held by the group are deemed to be treasury shares for accounting purposes. For the statement of financial position, the cost price of FirstRand shares held long is deducted from equity and the consideration received from selling FirstRand shares short is added back to equity. All gains and losses on FirstRand shares are reversed to profit or loss.

In addition, one of the group's joint ventures also holds FirstRand shares for client trading activities. In terms of IAS 32, profits or losses cannot be recognised on an entity's own equity instruments. The group's portion of the fair value change in the FirstRand shares is, therefore, deducted from equity-accounted earnings and the carrying value of the investment recognised using the equity-accounted method. The shares held by the joint venture are not deducted from equity.

Changes in the fair value of FirstRand shares and dividends declared on these shares affect the fair value of client trading positions reflected in the statement of financial position, unless the client trading position is itself an equity instrument. The change in the fair value of client trading positions is recognised in profit or loss. However, because of the rules relating to treasury shares and the elimination of upstream and downstream profits, when equity accounting is applied the corresponding fair value changes (or the group's portion of the fair value changes) in the FirstRand shares held to match client trading positions are reversed or eliminated. This results in a mismatch in the overall equity and profit or loss of the group.

For the purposes of calculating normalised results the adjustments described above are reversed, and FirstRand shares held for client trading positions are treated as issued to parties external to the group.

Where the client trading position is itself an equity instrument, neither gains nor losses on client trading positions or FirstRand shares held to hedge these are reflected in profit or loss or on the statement of financial position.

Margin-related items included in fair value income

In terms of IFRS the group has elected to measure certain financial assets and liabilities at fair value through profit or loss. In terms of the group's IFRS accounting policies, the gains or losses on these assets and liabilities are included in fair value income within NIR. This results in NIR including gains or losses that are related to lending, borrowing and economic interest rate hedges. In order to reflect the economic substance of these amounts, the amount of fair value income that relates to margin is presented in NII in the normalised results.

The amount reclassified from NIR to NII includes the following items:

- > the margin on the component of the wholesale advances book in RMB that is measured at fair value through profit or loss;
- > fair value gains on derivatives that are used as interest rate hedges, but which do not qualify for hedge accounting; and
- > currency translations and associated costs inherent to the USD funding and liquidity pool.

IAS 19 remeasurement of plan assets

In terms of IAS 19, interest income is recognised on the plan assets and offset against staff costs in the income statement. All other remeasurements of plan assets are recognised in other comprehensive income. In instances where the plan asset is a qualifying insurance policy, which has a limit of indemnity, the fair value of the plan asset is limited to that limit of indemnity. The limit of indemnity continually reduces as payments are made in terms of the insurance policy. After the recognition of interest income on the plan asset, any further adjustment required to revalue the plan asset to the limit of indemnity is recognised in other comprehensive income. To the extent, therefore, that interest income on plan assets results in an increase in the fair value of the plan asset above the limit of indemnity, a downward fair value measurement is recognised in other comprehensive income. Economically, the value of the plan asset has simply reduced with claims paid. Normalised results are adjusted to reflect this by increasing staff costs for the value of the interest on the plan assets and increasing other comprehensive income.

Realisation on the sale of private equity subsidiaries

In terms of *Circular 01/2021 – Headline Earnings*, gains or losses from the sale of subsidiaries are excluded from headline earnings.

The circular includes specific industry rules. Rule 1 allows entities to include in headline earnings gains or losses associated with private equity investments that are associates or joint ventures, which form part of trading or operating activities. The industry rule, however, does not apply to gains or losses associated with private equity investments that are subsidiaries. The group includes gains or losses on the sale of private equity subsidiaries in normalised results to reflect the nature of these investments.

Presentation continued

Cash-settled share-based payments and the economic hedge

The group entered into various total returns swaps (TRSs) with external parties to economically hedge itself against the exposure to changes in the FirstRand share price associated with the group's share schemes.

In accordance with IFRS 2, the expense resulting from these option schemes is recognised over the vesting period of the schemes. This leads to a mismatch in the recognition of the profit or loss of the hedge and the share-based payment expense.

When calculating normalised results, the group defers the recognition of the fair value gain or loss on the hedging instrument for the specific reporting period to the period in which the IFRS 2 impact will manifest in the group's results. This reflects the economic substance of the hedge and associated IFRS 2 impact for the group, regarding the share schemes that are not hedge accounted.

In addition, the portion of the share-based payment expense which relates to the remeasurement of the liability arising from changes in the share price is reclassified from operating expenses into NIR in accordance with the economics of the transaction. The share-based payment expense included in operating expenses is equal to the grant date fair value of the awards given.

Headline earnings adjustments

All adjustments required by *Circular 01/2021 – Headline Earnings* in calculating headline earnings are included in normalised earnings on a line-by-line basis based on the nature of the adjustment.

The description and the amount of these adjustments are provided in the reconciliation between headline earnings and IFRS profit on page 174.

Restatement of prior period numbers

The group obtained a legal opinion which confirmed the group's legal right to set off positions held with the London Clearing House (LCH), of which FirstRand Securities, a subsidiary of FirstRand International, is a clearing member. The group restated its financial statements to appropriately reflect the net presentation of derivative assets and derivative liabilities with the LCH in the comparative information.

The change in presentation has no impact on the profit or loss or net asset value of the group and only affects the presentation of derivative assets and derivative liabilities on the statement of financial position.

Restated condensed consolidated statement of financial position

Normalised earnings	18 047	15 742	15	32 663

* The group uses various TRISs with external parties to economically hedge itself against the exposure to changes in the FirstRand share price associated with the group's long-term incentive schemes. A TRIS is accounted for as a derivative in terms of IFRS with the fair value change recognised in NIR unless it qualifies for hedge accounting. In the current period, FirstRand's share price decreased R0.25 and increased R7.21 during the prior period. This results in mark-to-market volatility period-on-period being included in the group's IFRS attributable earnings. The normalised results reflect the adjustment to normalise this period-on-period IFRS fair value volatility from the TRIS, as described in more detail on page 164.

** Include FirstRand shares held for client trading activities.

Realisation of private equity subsidiaries net of private equity related goodwill and other asset impairments.

* No recoveries of bad debts written off or modification losses are attributable to advances measured at fair value.

Basis of preparation of the reconciliation of gross carrying amount and loss allowance on total advances per class

The basis of presentation of the reconciliation of the gross carrying amount (GCA) and loss allowance on advances can be found in *Note 11 – Advances* in the annual financial statements available on the group's website at www.firstrand.co.za/investors/annual-reporting.

Basis for determination of classes

The type of client is used as a primary indicator to determine classes of advances, and then the type of loans provided to that type of client is reflected as subclasses.

Voluntary changes in presentation

Core lending advances

During the year the group updated the presentation of total advances to reflect core lending advances and assets under agreements to resell separately. The group's core lending advances consist of customer advances and marketable advances. Assets under agreements to resell are fully collateralised and are included in stage 1 at significant coverage. All tables relating to the gross carrying amount of advances is presented for total advances and the total advances are split between core lending advances and assets under agreements to resell.

Asset-based finance book

ABF advances with customers that bank with FNB were moved from FNB commercial to WesBank corporate. This change was implemented to create consistency of process and to effect business efficiencies by managing the ABF book as a single portfolio within WesBank. The group has voluntarily updated the comparative information. Details of the comparative information that has been restated are included in *Note 4 – Voluntary changes to presentation*.

Revolving facility

Revolving facilities have been moved from the retail other segment to personal loans. These revolving facilities are used by customers in meeting longer-term, high-value lending needs. This move will enable a single view of medium-term unsecured lending products and will align the external reporting with how these products are managed internally. The group has voluntarily updated the comparative information. Details of the comparative information that has been restated are included in *Note 4 – Voluntary changes to presentation*.

General presentation of the advances note

The group made voluntary changes to the presentation of the reconciliations within this note. To allow the user to compare the amended comparatives to the information previously presented in this booklet, the information previously presented for 30 June 2022 has been included in *Note 39 – Change in presentation of advances* in the annual financial statements available on the group's website at www.firstrand.co.za/investors/annual-reporting.

Temporary stress scenario

Given the event-driven uncertainty in the global and South African economy and the forecasting risks of economic assumptions in existing statistical models, an additional stress scenario was introduced during the financial year ended 30 June 2021. The scenario was initially introduced to capture the uncertainty around the impact of the Covid-19 pandemic and subsequently to address risks brought about by the impact of Russia's invasion of Ukraine and inflation and interest rate forecasting risks. Since June 2022, the forecasting risks relating to inflation and interest rates have subsided and have to some extent been incorporated into the group's impairment models, with the expectation to be largely captured within the models by June 2023.

The absolute levels of provisioning and stage classification at 30 June 2022 was maintained. This was done to allow management time to assess and conclude that inflation and interest forecasting risks have been sufficiently incorporated into models. In addition, the unprecedented levels of loadshedding and the resultant impact on domestic growth and employment, have introduced new forecasting risks not specifically catered for in impairment models. On-balance, management has assessed that the absolute provisions raised at 30 June 2022 are sufficient to address these risks.

Management will continually reassess the need for this scenario as credit performance data emerges and risks are adequately embedded in-model, or through specifically quantified post-model adjustments, as required.

Due to the temporary nature of this stress scenario, and consistent with December 2021 and June 2022, the impact on the staging of the gross carrying amount and the additional ECL attributable to this scenario have been separately presented in all tables with information per class in the line *Temporary stress scenario*.

Significant estimates, judgements and assumptions relating to the impairment of advances

Forward-looking information incorporated in the impairment of advances

Forward-looking information has been incorporated into the expected loss estimates through the application of quantitative modelling and expert judgement-based adjustments. The process of incorporating the forward-looking information into the expected loss estimates has not changed since 30 June 2022, but there have been changes to the probabilities assigned to the scenarios and the inputs used. For the group's South African and broader Africa operations, three macroeconomic scenarios are utilised, namely a base scenario, an upside scenario and a downside scenario. Consistent with the approach followed at 30 June 2022, an additional stress scenario was added to the macroeconomic scenarios applied to the retail and commercial portfolios, however retained at the same levels as 30 June 2022. The reason for including the temporary stress scenario to only these portfolios is that the RMB CIB portfolio already incorporates stressed scenarios for high-risk industries and the impact within broader Africa was not found to be material.

Overview of forward-looking information included in the 31 December 2022 impairment of advances

During the calendar year ended 31 December 2022 global economic growth continued to moderate with the sectoral composition of activity shifting from goods towards services. With the invasion of Ukraine having exacerbated the already elevated cost-of-living pressures in both developed and emerging economies, central banks persisted with aggressive interest rate hikes to stem inflation, resulting in further downward revisions to growth expectations and increased risk aversion. These hikes were coupled with plans to reduce fiscal stimulus, but this had to be balanced with shielding consumers from the impacts of slowing growth and higher inflation. The complexity of these policy actions, combined with a significant increase in geopolitical risk, resulted in ongoing market volatility.

South Africa

South Africa's inflation rate lifted above the central bank's target range, resulting in an interest rate hiking cycle to lower longer-term inflation expectations. Real economic activity continued to slow, with domestic household consumption in particular being impacted by the higher headline inflation. Despite the slowdown in overall activity, household data showed that income levels among the employed had improved from a low base, with corporates starting to add headcount after Covid-19-induced job cuts. This, combined with a reduction in precautionary savings rates, underpinned household credit growth and provided some support to house prices despite higher interest rates.

Severe rolling blackouts in the second half of the year weighed on certain corporates, while others benefited from higher commodity prices and the opportunity to produce their own energy following the government's removal of the self-generation cap. This provided the basis for further increases in corporate credit demand.

United Kingdom

The 2022 calendar year was characterised by the cost-of-living crisis and rising interest rates. Both escalated far past early year expectations following the Russian invasion of Ukraine. Goods and commodity prices surged, and most notably a European energy crisis emerged. While these supply side/external factors are less sensitive to monetary policy, they quickly fed through to inflation expectations, domestic inflation and wage growth. This caused the central bank to quickly and aggressively raise interest rates far above consensus and market expectations. Housing and labour market indicators have passed their peaks, but the risks to the UK economy are tilted to the downside.

Broader Africa

General

The operating environment in the countries in broader Africa where the group operates was largely characterised by the recovery in commodity prices, higher inflation and tighter monetary policy. Structural weaknesses pre-date the pandemic for most of the countries in broader Africa, and will continue to constrain the recovery in the medium term – in particular Ghana and Zambia, given their distressed debt positions and further fiscal pressures in Southern African Customs Union (SACU) countries.

Namibia

Growth in Namibia gradually began to lift from its pandemic lows, driven by base effects, increased mining output and an improvement in SACU revenues. These factors pose an upside to growth alongside expected investments in renewable energy infrastructure. Despite these improvements, rising inflation remained a constraint on economic activity overall. Due to the currency peg with the South African rand, Namibia's monetary policy flexibility is constrained during hiking cycles as interest rates must be on par with or above those of South Africa in line with Namibia's official monetary policy framework. Monetary policy therefore poses further constraints on growth expectations given the country's weak consumption fundamentals, particularly as households are already highly indebted.

Botswana

During the calendar year Botswana's economy rebounded due to a significant recovery in the mining sector. Growth to September 2022 averaged 35%, primarily led by improved diamond mining activities as global demand continued to recover. In the medium term, the mining sector should also be supported by the resumption of local copper mining activity. However, the disruptions caused by the war between Russia and Ukraine, along with the sanctions imposed on Russia, pose upside risks to inflation. Inflation in Botswana increased considerably during the year, due to these factors as well as higher administered prices, while a new policy rate, termed the Monetary Policy Rate, was implemented. Persistent high inflation and monetary policy risk may limit the upside to economic activity gains.

Significant estimates, judgements and assumptions relating to the impairment of advances continued

The table below sets out the most significant macroeconomic factors used to estimate the forward-looking information relating to ECL provisions. The information is forecast over a period of three years per major economic region that the group operates in. The information below reflects the scenarios and probabilities assigned to each scenario, at 31 December 2022, for the South African and broader Africa regions.

Scenario	Probability	Description
Baseline	55% (June 2022: 54%; December 2021: 58%)	<ul style="list-style-type: none"> > Global economic growth slows below trend level and developed market (DM) inflation remains high, but does not spiral out of control. > South Africa struggles to lift the potential growth rate meaningfully over the forecast horizon. > Confidence normalises from depressed levels, inducing a normalisation in credit and savings growth. > Social unrest remains elevated but does not significantly impair confidence or operating conditions. > The climate transition progresses slowly and negotiations on the detail of the climate change deal at the United Nations Climate Change conference (COP26 deal) takes a long time with a lack of meaningful implementation progress. > Russia's invasion of Ukraine contributes to higher headline inflation which limits the potential upside to real disposable income growth.
Upside	12% (June 2022: 14%; December 2021: 14%)	<ul style="list-style-type: none"> > Global growth remains slow towards trend but soon recovers keeping commodity prices elevated through the forecast horizon. > The South African government manages the carbon transition effectively and negotiations on the detail of the COP26 deal make meaningful progress. > Social unrest abates. > Broader fiscal and economic reforms lift the potential growth rate meaningfully over the forecast horizon. > Private sector confidence and related investment lift, resulting in higher credit extension and a drawdown in precautionary savings. > The inflationary impact of Russia's invasion of Ukraine moderates significantly.
Downside	33% (June 2022: 32%; December 2021: 28%)	<ul style="list-style-type: none"> > Global inflation remains above central banks' comfort levels, resulting in further policy tightening with negative knock-on consequences for global financial conditions and risk appetite. > The South African government experiences significant setbacks in its efforts to manage the energy transition and decarbonisation process. > The country fails to implement growth-enhancing economic reforms. > The Covid-19 epidemic resurges, resulting in increased economic restrictions. > Real credit extension falls and savings lift. > Russia's invasion of Ukraine drives headline inflation significantly higher and real disposable income growth significantly lower.
Temporary stress scenario		The ECL impact of the temporary stress scenario as well as its impact on the staging of the GCA has been tracked separately for classes of advances within the retail and commercial portfolios, where the temporary stress scenario had a material impact. Therefore, for the retail and commercial portfolios a weighting of 8% (December 2021: 8%) has been attributed to the temporary scenario, 11% (December 2021: 13%) to the upside scenario, 30% (December 2021: 26%) attributed to the downside and 51% (December 2021: 53%) to the baseline scenario. The weightings assigned to the stress scenario has remained unchanged since 30 June 2022.

The following table sets out the scenarios and probabilities assigned to each scenario at 31 December 2022, for the UK operations:

Scenario	Probability	Description
Base	60% (June 2022: 45%; December 2021: 50%)	<ul style="list-style-type: none"> > There is an expectation of a recession during 2023 driven by declining real incomes and restrictive fiscal and monetary policy stances. > The UK is starting to feel the impact of rising interest rates and the considerable squeeze on disposable income in the real economy. Households continue to rotate their spending from non-essential to essential, such as housing costs. > Inflation now appears past its peak, however headline and domestic inflation are still uncomfortably high for the BoE in, which still has further tightening to deliver. Expectations are that despite many inflation measures either peaking or nearing their peak, the BoE will continue to tighten policy to 4.25% in early 2023. However, risks remain two-sided around that view. > As a result of the cost-of-living crisis and tighter financial conditions, the labour market is set to loosen, resulting in a mild rise in unemployment to 4.9%. House prices are expected to fall by 9%. Business attitudes are also changing as margins and profits come under pressure and the economic environment worsens. The nature of the cost-of-living crisis means that individual household and business finance quality will be crucial.
Upside	15% (June 2022: 5%; December 2021: 10%)	<ul style="list-style-type: none"> > The UK narrowly avoids a technical recession. Increased fiscal prudence and reduced political uncertainty restores market and public confidence and supports spending and investment. > The energy price guarantee and excess savings is successful in cushioning the cost-of-living crisis. > Wholesale agriculture and energy risks subside and lower headline inflation and forward expectations in the near term. There is no energy price cliff edge. > Falling headline inflation and increased fiscal discipline temper rising wage settlement expectations, resulting in a shorter tightening cycle from the BoE, which is wary of overtightening. > Forward inflation expectations settle slightly higher than pre-pandemic in the medium term, and households run down excess savings at a faster pace, raising both productivity and trend growth compared to the post financial crisis period. > Labour supply mismatches clear rapidly and unemployment continues to fall in the near term as the market successfully absorbs increasing labour supply. House prices growth slows sharply but remains positive, with demand supported by mortgage rates falling back more rapidly.

Significant estimates, judgements and assumptions relating to the impairment of advances

continued

Scenario	Probability	Description
Downside	20% (June 2022: 35%; December 2021: 25%)	<ul style="list-style-type: none"> > A monetary policy induced recession leads to a further deterioration in real incomes and consumer as well as business confidence. > Fiscal support is ineffective at supporting households and businesses during the cost-of-living crisis, leading them to significantly rein in consumption and investment. A deteriorating economy together with the markets' perception of increased fiscal vulnerability causes a prolonged depreciation in the pound, which pushes up imported and producer inflation. Together with higher domestically generated inflation, elevated inflation expectations and rising pay growth, the BoE responds more forcefully, further front-loading policy and taking the bank rate to 5.25%. > Business insolvencies rise, focused on SMEs that are already highly indebted and/or are reeling from the fall-out of the pandemic. Redundancies triggered by increased insolvencies, as well as returning inactive workers seeking to boost income, result in unemployment reaching 7%. House prices fall by 12% peak-to-trough due to increased forbearance and forced selling, with larger declines in regions where affordability metrics are most stretched.
Severe downside	5% (June 2022: 15%; December 2021: 15%)	<ul style="list-style-type: none"> > The cost-of-living crisis and a resurgence of the energy crisis leads to a wage-price spiral and aggressive action from central banks, leading to a deep recession comparable to the 2008 global financial crisis. > Geopolitical risks mean that wholesale commodity prices remain elevated. The UK is unsuccessful in reforming domestic energy markets quickly enough and to prevent another energy crisis. > Governments are less able to provide significant additional financial support due to already elevated debt levels and soaring interest rates. > The BoE takes interest rates to 6% and they stay higher for longer. Inflation stays considerably above the BoE's target for a prolonged period of time. > The significant decline in real disposable income causes permanent scarring of the UK economy and lowers trend growth. The UK sees a 9.2% peak unemployment and a sharp decline in household income, while soaring mortgage rates cause a record 20% fall in house prices.

Significant macroeconomic factors as at 31 December 2022

The table below sets out the most significant macroeconomic factors used to estimate the forward-looking information relating to ECL provisions. The information is forecast over a period of three years, per major economic region that the group operates in. The information below reflects the group's forecasts for each period at 31 December.

Additional disclosures for level 3 financial instruments

Transfers between fair value hierarchy levels

The following represents the significant transfers into level 1, 2 and 3 and the reasons for these transfers. Transfers between levels of the fair value hierarchy are deemed to occur at the beginning of the reporting period.

<i>R million</i>	As at 31 December 2022		
	Transfers in	Transfers out	Reasons for significant transfers in
Level 1	219	(559)	The market for certain investment securities had become liquid in the current period, resulting in transfers from level 3 into level 1.
Level 2	310	–	Increased liquidity in the market for certain investment securities resulted in transfers from level 3 to level 2 due to significant inputs becoming more observable during the current period.
Level 3	559	(529)	Investment securities whose fair value had been observable in a traded market no longer met the criteria for level 1, as the market had become illiquid and the fair value was determined using significant unobservable inputs.
Total transfers	1 088	(1 088)	

<i>R million</i>	As at 31 December 2021		
	Transfers in	Transfers out	Reasons for significant transfers in
Level 1	269	(898)	The market for certain listed investment securities had become liquid in the current period, resulting in transfers from level 3 into level 1.
Level 2	1 929	–	The significant inputs for determining the fair value of certain unlisted derivatives and deposits had become observable as the financial instruments approached their respective maturity dates, and therefore transferred from level 3 to 2.
Level 3	898	(2 198)	Investment securities whose fair value had been observable in a traded market no longer met the criteria for level 1, as active trading ceased during the period and the inputs into the fair value model were no longer observable.
Total transfers	3 096	(3 096)	

<i>R million</i>	As at 30 June 2022		
	Transfers in	Transfers out	Reasons for significant transfers in
Level 1	689	(41)	The market for certain investment securities had become liquid in the current year which resulted in transfers from level 3 into level 1.
Level 2	607	(1 405)	Increased liquidity in the market for certain investment securities, as well as equity-linked deposits that were approaching maturity, resulted in transfers from level 3 to level 2 due to significant inputs becoming more observable during the current period.
Level 3	1 446	(1 296)	Investment securities and equity-linked deposits, whose fair value had been observable in a traded market, no longer met the criteria for level 1 and level 2, as the market had become illiquid and the fair value was determined using significant unobservable inputs.
Total transfers	2 742	(2 742)

Balance as at 31 December 2022	772	50 661	3 785	378	

Decreases in level 3 assets and liabilities are included in brackets. Decreases in the value of assets are the result of losses, sales and settlements or the disposal of subsidiaries. Decreases in the values of liabilities are the result of gains, settlements or the disposal of subsidiaries.

Gains or losses on advances classified as level 3 of the hierarchy comprise gross interest income on advances, fair value of credit adjustments, and adjustments due to changes in the currency and base rates. These instruments are funded by liabilities whereby the inherent risk is hedged by interest rate or foreign currency swaps. The corresponding gross interest expense is not disclosed in the fair value note as these items are typically measured at amortised cost.

Fair value measurements continued

Unrealised gains or losses on level 3 instruments with recurring fair value measurements

The valuation models for level 3 assets or liabilities typically rely on a number of inputs that are not readily observable, either directly or indirectly. Thus, the gains and losses presented below include changes in the fair value related to both observable and unobservable inputs.

The table below presents the total gains or losses relating to the remeasurement of assets and liabilities carried at fair value on a recurring basis and classified as level 3, that are still held at reporting date. With the exception of interest on funding instruments designated at fair value through profit or loss (FVTPL) and FVOCI debt instruments, all gains or losses are recognised in NIR.

* Mainly accrued interest on fair value loans and advances and movements in interest rates and foreign currency that have been economically hedged. These advances are primarily classified as level 3, as credit spreads could be a significant input and are not observable for loans and advances in most of RMB's key markets. Inputs relating to interest rates and foreign currencies are regarded as observable.

Irrevocable commitments	184 322	167 410	10	172 795
Committed capital expenditure*	4 667	3 737	25	5 315
Legal proceedings**	75	287	(74)	219
Other	26	37	(30)	72
Contingencies and commitments	263 261	237 572	11	251 639

* Commitments in respect of capital expenditure and long-term investments approved by the directors.

** There is a small number of potential legal claims against the group, the outcome of which is uncertain at present. These claims are not regarded as material, either on an individual or a total basis, and arise during the normal course of business. On-balance sheet provisions are only raised for claims that are expected to materialise.

The December 2021 balances have been restated, the impact and rationale of the restatement are disclosed below.

<i>R million</i>	Previously reported	Reclassified	Adjusted	Restated
Contingencies and commitments				
Guarantees (endorsements and performance guarantees)*	48 547	3 120	–	51 667
Letters of credit	14 434	–	–	14 434
Total contingencies	62 981	3 120	–	66 101
Irrevocable commitments*	183 483	(16 073)	–	167 410
Committed capital expenditure**	2 421	–	1 316	3 737
Legal proceedings	287	–	–	287
Other	37	–	–	37
Contingencies and commitments	249 209	(12 953)	1 316	237 572

* During the year ended June 2022, the methodology and business rules for classification of off-balance sheet items in the retail secured lending business were reviewed and streamlined. This resulted in the re-presentation of certain balances from irrevocable commitments to guarantees. The remaining amount removed from irrevocable commitments relates to revocable commitments of R12 953 million incorrectly classified (revocable commitments do not meet the definition of contingencies and commitments). The related release of ECL on this restatement is not material.

** Committed capital, approved by the directors, has been restated following the identification of amounts that should have been included and which became apparent as a result of improved reporting tools implemented.

Definitions

Additional Tier 1 (AT1) capital	AT1 capital instruments and qualifying capital instruments issued out of fully consolidated subsidiaries to third parties less specified regulatory deductions
Age distribution	The number of months between the loan completion and the end of the reporting period plus one (in line with the banding requirements). Percentage for each age band is based on the current exposure
Arrears	A percentage that expresses the current exposure of the loans with one or more months in arrears to the total current book exposure for the reporting period
Balance-to-market value	The current exposure divided by the indexed valuation (indexing model uses Nationwide and IPD indices). Percentage for each balance-to-market value band is based on the current exposure
Balance-to-original value	The current exposure divided by the original valuation. Percentage for each balance-to-original value band is based on the current exposure
Capital adequacy ratio (CAR)	Total qualifying capital and reserves divided by RWA
Common Equity Tier 1 (CET1) capital	Share capital and premium, qualifying reserves and third-party capital, less specified regulatory deductions
Core lending advances	Total advances excluding assets under agreements to resell
Cost-to-income ratio	Operating expenses excluding indirect taxes expressed as a percentage of total income including share of profits from associates and joint ventures
Credit loss ratio	Total impairment charge per the income statement expressed as a percentage of average core lending advances (average between the opening and closing balance for the year)
Diversity ratio	Non-interest revenue expressed as a percentage of total income including share of profits from associates and joint ventures
Dividend cover	Normalised earnings per share divided by dividend per share
Effective tax rate	Tax per the income statement divided by the profit before tax per the income statement
Impairment charge	Amortised cost impairment charge and credit fair value adjustments
Loan-to-deposit ratio	Average advances expressed as a percentage of average deposits
Loss given default (LGD)	Economic loss that will be suffered on an exposure following default of the counterparty, expressed as a percentage of the amount outstanding at the time of default
Net income after capital charge (NIACC)	Normalised earnings less the cost of equity multiplied by the average ordinary shareholders' equity and reserves
Normalised earnings	The group believes normalised earnings more accurately reflect its economic performance. Headline earnings are adjusted to take into account non-operational and accounting anomalies
Normalised earnings per share	Normalised earnings attributable to ordinary equityholders divided by the weighted average number of shares, including treasury shares
Normalised net asset value	Normalised equity attributable to ordinary equityholders
Normalised net asset value per share	Normalised equity attributable to ordinary equityholders divided by the number of issued ordinary shares
Price earnings ratio (times)	Closing price at end of period divided by basic normalised earnings per share
Price-to-book (times)	Closing share price at end of period divided by normalised net asset value per share
Return on assets (ROA)	Normalised earnings divided by average assets
Return on equity (ROE)	Normalised earnings divided by average normalised ordinary shareholders' equity
Risk-weighted assets (RWA)	Prescribed risk weightings relative to the credit risk of counterparties, operational risk, market risk, equity investment risk and other risk multiplied by on- and off-balance sheet assets, where applicable
Shares in issue	Number of ordinary shares listed on the JSE
Technical cures	Performing accounts that are classified as stage 3/NPL because they have defaulted in the past and do not meet the stringent cure definition of performance for several consecutive months
Tier 1 ratio	Tier 1 capital divided by RWA
Tier 1 capital	CET1 capital plus AT1 capital
Tier 2 capital	Qualifying subordinated debt instruments, capital instruments issued out of fully consolidated subsidiaries to third parties, and qualifying provisions less specified regulatory deductions
Total qualifying capital and reserves	Tier 1 capital plus Tier 2 capital
Weighted average number of ordinary shares	Weighted average number of ordinary shares in issue during the year as listed on the JSE
